ARTIFICIAL INTELLIGENCE (AI) APPLICATIONS IN AUTOMATING CUSTOMER SERVICES AND EMPLOYEE SUPERVISION Siliang Tong,2020 Across two essays I explore how artificial intelligence AI applications can help businesses automate customer service with deep learning driven natural conversation and improve employee performance with work supervision I apply machine learning methods such as audio analytics and text mining as well as field experiments to explore these new AI driven capabilities in customer service and employee supervision automation Substantively this research tackles emerging business questions regarding how AI applications can assist customer purchases and employee job performance In Essay One I apply two experiments to investigate when and how AI voicebots work or struggle in persuading customers relative to human agents In Experiment 1 I apply audio analytics to extract agents voice features i e pitch amplitude and speed and speech content i e selling adaptivity My analyses suggest two distinct routes to explain how agents speech patterns account for their performance Analyses in Experiment 2 demonstrate that relative to human agents AI bots could backfire and lead to worse performance when the customer persuasion task is more complex In my second essay I explore the coexistence of performance improvement and employee resistance to AI supervision Specifically I develop a novel two by two field experiment which randomly assigns the AI or human supervision entity and discloses the entity or not to separate the economic gain from negative reactance to AI In addition I uncover the underlying mechanism by identifying employees subjective bias to the AI feedback quality and heightened fear of job replacement once they know the supervision entity is AI rather than human managers I propose two strategies to alleviate employees resistance to AI supervision

Reviewing **How To Automate Customer Service With AI Organically BATCH23 2160**: Unlocking the Spellbinding Force of Linguistics
