Math Question 2013:

The Math Myth Andrew Hacker, 2010-05-25 A New York Times bestselling author looks at mathematics education in America when it is worthwhile and when it is not. Why do we inflict a full menu of mathematics algebra geometry trigonometry even calculus on all young Americans regardless of their interests or aptitudes? While Andrew Hacker has been a professor of mathematics himself and extols the glories of the subject, he also questions some widely held assumptions in this thought-provoking and practical-minded book. Does advanced math really broaden our minds? Is mastery of arithmetics and asymptotes needed for success in most jobs? Should the entire Common Core syllabus be required of every student? Hacker worries that our nation's current frenzied emphasis on STEM is diverting attention from other pursuits and even subverting the spirit of the country. Here he shows how mandating math for everyone prevents other talents from being developed and acts as an irrational barrier to graduation and careers. He proposes alternatives including teaching facility with figures quantitative reasoning and understanding statistics. Expanding upon the author's viral New York Times op-ed, *The Math Myth* is sure to spark a heated and needed national conversation not just about mathematics but about the kind of people and society we want to be. Hacker's accessible arguments offer plenty to think about and should serve as a clarion call to students, parents, and educators who decry the one-size-fits-all approach to schooling. Publishers Weekly starred review. [Learning Technology for Education Challenges](#) Lorna Uden, Dario Liberona, Galo Sanchez, Sara Rodríguez-González, 2019-05-27 This book constitutes the refereed proceedings of the 8th International Workshop on Learning Technology for Education Challenges LTEC 2019 held in Zamora, Spain, in July 2019. The 41 revised full papers presented were carefully reviewed and selected from 83 submissions. The papers are organized in the following topical sections: learning technologies, learning tools and environment, e-learning and MOOCs, learning practices, social media, learning tools, machine learning and evaluation, support programs. LTEC 2019 examines how these technologies and pedagogical advances can be used to change the way teachers teach and students learn, while giving special emphasis to the pedagogically effective ways we can harness these new technologies in education. **Introduction to Sofic and Hyperlinear Groups and Connes' Embedding Conjecture** Valerio Capraro, Martino Lupini, 2015-10-12 This monograph presents some cornerstone results in the study of sofic and hyperlinear groups and the closely related Connes embedding conjecture. These notions, as well as the proofs of many results, are presented in the framework of model theory for metric structures. This point of view, rarely explicitly adopted in the literature, clarifies the ideas therein and provides additional tools to attack open problems. Sofic and hyperlinear groups are countable discrete groups that can be suitably approximated by finite symmetric groups and groups of unitary matrices. These deep and fruitful notions, introduced by Gromov and Radulescu respectively in the late 1990s, stimulated an impressive amount of research in the last 15 years, touching several seemingly distant areas of mathematics, including geometric group theory, operator algebras, dynamical systems, graph theory, and quantum information theory. Several long-standing conjectures

still open for arbitrary groups are now settled for sofic or hyperlinear groups The presentation is self contained and accessible to anyone with a graduate level mathematical background In particular no specific knowledge of logic or model theory is required The monograph also contains many exercises to help familiarize the reader with the topics present

Mathematical Problem Posing Lukas Baumanns,2022-11-19 Mathematical problem posing as the substantive formulation of mathematical problems is an activity that lies at the heart of mathematics In recent years research in mathematics education has endeavored to gain insights into problem posing conceptually as well as empirically In problem posing research there has been a focus on analyzing products that is the posed problems Insights into the processes that lead to these products however have so far been lacking Within four journal articles summarized in this cumulative dissertation the author attempts to contribute to the understanding of problem posing processes through conceptual considerations and empirical investigations The conceptual part consists of a conducted systematic literature review to investigate problem posing situations and problem posing activities The studies in the empirical part deal with the analyses of problem posing processes of pre service mathematics teachers from a macroscopic and microscopic perspective The aim is to develop coherent and meaningful conceptual perspectives for analyzing empirical observations of problem posing processes
