Phonology in the Bilingual and Bidialectal Lexicon Isabelle Darcy, Annie Tremblay, Miquel Simonet, 2017-07-06 A conversation between two people can only take place if the words intended by each speaker are successfully recognized Spoken word recognition is at the heart of language comprehension This automatic and smooth process remains a challenge for models of spoken word recognition Both the process of mapping the speech signal onto stored representations for words and the format of the representation themselves are subject to debate So far existing research on the nature of spoken word representations has focused mainly on native speakers The picture becomes even more complex when looking at spoken word recognition in a second language Given that most of the world's speakers know and use more than one language it is crucial to reach a more precise understanding of how bilingual and multilingual individuals encode spoken words in the mental lexicon and why spoken word recognition is more difficult in a second language than in the native language Current models of native spoken word recognition operate under two assumptions i that listeners perception of the incoming speech signal is optimal and ii that listeners lexical representations are accurate As a result lexical representations are easily activated and intended words are successfully recognized However these assumptions are compromised when applied to a

later learned second language For a variety of reasons e g phonetic phonological orthographic second language users may not perceive the speech signal optimally and they may still be refining the motor routines needed for articulation Accordingly their lexical representations may differ from those of native speakers which may in turn inhibit their selection of the intended word forms Second language users also have to solve a larger selection challenge having words in more than one language to choose from Thus for second language users the links between perception lexical representations orthography and production are all but clear Even for simultaneous bilinguals important questions remain about the specificity and interdependence of their lexical representations and the factors influencing cross language word activation This *Frontiers Research Topic* seeks to further our understanding of the factors that determine how multilinguals recognize and encode spoken words in the mental lexicon with a focus on the mapping between the input and lexical representations and on the quality of lexical representations *Whitaker's Books in Print* ,1998 *Canadiana* ,1990-04 [LACUS Forum](#) Linguistic Association of Canada and the United States,1996 *Popular Science* ,1976-12 *Popular Science* gives our readers the information and tools to improve their technology and their world The core belief that *Popular Science* and our readers share The future is going to be better and science and technology are the driving forces that will help make it better *Stereo Review* ,1994 *Hi-fi News & Record Review* ,1994 **Audio** ,1978 *Popular Science* ,1976 **Reference Books Bulletin** ,1994
