Interpretation of Topographical Maps

Syllabus

Interpretation of Topographical Maps*
 Locating features with the help of a four figure or a six figure grid reference.

MAPS AND THEIR SIGNIFICANCE

The earth is a huge planet with varied relief features like mountains, plateaus, valleys, rivers, lakes, seas and oceans. Due to its enormous size and spherical shape, it is not possible to view the entire earth at the same time. Consequently, it is not possible to represent the whole earth on a flat surface. This difficulty has been resolved by using various models of the earth like the Globes and the Maps.

A Globe is a three-dimensional representation of the earth. It is the only true representation of the earth, indicating its shape, direction, area and other features. However, a globe has certain limitations. Due to its limited space, it cannot represent physical features and other characteristics in detail. Further, topographic details cannot be shown on a globe.

Therefore, to represent three-dimensional features like mountains, valleys, rivers and other geographical phenomena, special techniques are used so that these features can be drawn on a uniform basis. This art and science of mapping is called cartography.

A map is defined as a representation of the earth's surface or a part of it, showing natural or man-made features, drawn to scale on a flat surface.
