

## LIZARD EVOLUTION VIRTUAL LAB

Answer the following questions as you finish each module of the virtual lab or as a final assessment after completing the entire virtual lab.

### Module 1: Ecomorphs

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?

I based my measures off of the legs. I picked the size of the legs since I believe that each of the unique anoles had advanced in view of their natural surroundings. I didn't amend my standards.

2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the Anolis lizards.

One transformation is the short legs on the sheplani hispanola anolis reptile. I think this is a direct result of the thin branches it was on. The more limited legs made it simpler for the reptile to clutch the slimmer branches.

3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics.

Lizards in the same habitat would have similar characteristics because there are many ways to do something, however there is only one way that is the best for surviving. Basically, lizards in the same habitat have the characteristics that are most fit for survival, so most lizards in that habitat would exhibit those most fit characteristics.

4. What is an ecomorph? Provide one example from the virtual lab.

What is an ecomorph? Provide one example from the virtual lab. Ecomorphs are species with similar body types and habitats. An example is how the sheplani Hispaniola and oculinus Puerto Rico lizards both have short legs.

5. How is an ecomorph different from a species?

It only classifies the organism as having similar body types and habitats, but species can have other different characteristics such as color or look.

6. Explain how a particular body feature of one of the lizard ecomorphs from the virtual lab is an adaptation to their particular niche.

The oculinus Puerto Rico anole has short legs because it needs to be able to stick to/crawl on slim twigs in their habitat.
