An Introduction to Generalized Linear Models Annette J. Dobson, Adrian G. Barnett, 2018-04-17 An Introduction to Generalized Linear Models Fourth Edition provides a cohesive framework for statistical modelling with an emphasis on numerical and graphical methods This new edition of a bestseller has been updated with new sections on non linear associations strategies for model selection and a Postface on good statistical practice Like its predecessor this edition presents the theoretical background of generalized linear models GLMs before focusing on methods for analyzing particular kinds of data It covers Normal Poisson and Binomial distributions linear regression models classical estimation and model fitting methods and frequentist methods of statistical inference After forming this foundation the authors explore multiple linear regression analysis of variance ANOVA logistic regression log linear models survival analysis multilevel modeling Bayesian models and Markov chain Monte Carlo MCMC methods Introduces GLMs in a way that enables readers to understand the unifying structure that underpins them Discusses common concepts and principles of advanced GLMs including nominal and ordinal regression survival analysis non linear associations and longitudinal analysis Connects Bayesian analysis and MCMC methods to fit GLMs Contains numerous examples from business medicine engineering and the social sciences Provides the example code for R Stata and WinBUGS to encourage implementation of the methods Offers the data sets and solutions to the exercises online Describes the components of good statistical practice to improve scientific validity and reproducibility of results Using popular statistical software programs this concise and accessible text illustrates practical approaches to estimation model fitting and model comparisons

An Introduction to Generalized Linear Models George H. Dunteman, Moon-Ho R. Ho, 2005-09-22 Do you have data that is not normally distributed and don't know how to analyze it using generalized linear models GLM Beginning with a discussion of fundamental statistical modeling concepts in a multiple regression framework the authors extend these concepts to GLM including Poisson regression logistic regression and proportional hazards models and demonstrate the similarity of various regression models to GLM Each procedure is illustrated using real life data sets and the computer instructions and results will be presented for each example Throughout the book there is an emphasis on link functions and error distribution and how the model specifications translate into likelihood functions that can through maximum likelihood estimation be used to estimate the regression parameters and their associated standard errors This book provides readers with basic modeling principles that are applicable to a wide variety of situations

Key Features Provides an accessible but thorough introduction to GLM exponential family distribution and maximum likelihood estimation Includes discussion on checking model adequacy and description on how to use SAS to fit GLM Describes the connection between survival analysis and GLM This book is an ideal text for social science researchers who do not have a strong statistical background but would like to learn more advanced techniques having taken an introductory course covering regression analysis
