presents the current evidence base the benefits of and numerous case studies on integrating health and the environment into urban development and transport planning Within cities there is a considerable variation in the levels of environmental exposures such as ambient air pollution noise and temperature green space availability and physical activity Many of these exposures and their adverse health impacts are related to and are being exacerbated by urban and transport planning and policy Emerging research suggests that urban and transport planning indicators such as road network distance to major roads traffic density household density industry and natural and green space can explain a large proportion of the variability in environmental exposures and therefore represent important and highly modifiable factors The urban environment is a complex interlinked system Decision makers need not only better data on the complexity of factors in environmental and developmental processes affecting human health but also an enhanced understanding of the linkages between these factors and health effects to determine at which level to target their actions most effectively In recent years there also has been a shift from trying to change at the national level to more comprehensive and ambitious actions being developed and implemented at the regional and local levels Cities have come to the forefront of providing solutions for environmental issues such as climate change which has co benefits for health but yet need better knowledge for wider health centric action This book provides the latest and most up to date information and studies for academics and practitioners alike

**Social Networks and Travel Behaviour** Prof Dr Kay W Axhausen, Dr Matthias Kowald, 2015-05-28 In aiming to understand and model peoples out of home movements the academic field of transport planning is confronted with two major challenges firstly leisure travel is increasing in importance and is more complex and variable than work related travel and secondly traditional aggregated transport models do not include any information on peoples social interactions or their personal social networks These two main factors have driven transport planners to focus on peoples interaction and their social network Providing an overview of selected exemplary studies this volume addresses the overlap between transport planning and methods of social network analysis applied methods of social network analysis and related empirical results and current challenges and new research questions in this field

**Handbook of Obesity Prevention** Shiriki Kumanyika, Ross Brownson, 2007-09-23 Comprehensive in scope and meticulously researched Handbook of Obesity Prevention analyzes the intricate causes of this public health crisis and sets out concrete multilevel strategies for meeting it head on This innovative handbook starts by clearly defining obesity in clinical epidemiologic and financial terms From there expert contributors provide insights on current issues methods and controversies in the field focusing on new opportunities for prevention successful interventions and initiatives and guidelines for planning and implementing programs and evaluating results This systematic approach to large scale social and policy change gives all parties involved from individual practitioners to multinational corporations the tools to set and attain realistic goals based on solid evidence and best practice in public health
