Investigations in Algebraic Theory of Combinatorial Objects I.A. Faradzev, A.A. Ivanov, M. Klin, A.J. Woldar, 2013-06-29 X K chendorffer L A Kalu lnin and their students in the 50s and 60s Nowadays the most deeply developed is the theory of binary invariant relations and their combinatorial approximations These combinatorial approximations arose repeatedly during this century under various names Hecke algebras centralizer rings association schemes coherent configurations cellular rings etc see the first paper of the collection for details and in various branches of mathematics both pure and applied One of these approximations the theory of cellular rings cellular algebras was developed at the end of the 60s by B Yu Weisfeiler and A A Leman in the course of the first serious attempt to study the complexity of the graph isomorphism problem one of the central problems in the modern theory of combinatorial algorithms At roughly the same time G M Adelson Velskir V L Arlazarov I A Faradtev and their colleagues had developed a rather efficient tool for the constructive enumeration of combinatorial objects based on the branch and bound method By means of this tool a number of sports like results were obtained Some of these results are still unsurpassed

Mathematical Investigations Phil DeMarois, Mercedes A. McGowen, Darlene Whitkanack, 2001 Reflective of AMATYC and NCTM standards for teaching mathematics this text the first in a series of two texts aims to make mathematics truly accessible to all students by taking an active approach to learning Focused on mathematical reasoning and problem solving strategies Mathematical Investigations presents a series of carefully sequenced investigations where students gather data and work collaboratively to discover key concepts The function concept is central to all topics from Chapter 3 forward and is explored through multiple representations This text explores variables notation and processes explicitly rather than assuming students have mastered these concepts in previous courses Content is explored in depth and contextual problems are revisited throughout the text to create a spiral that gives students multiple opportunities to master important skills and concepts Graphing calculators are integrated throughout the text to help students discover patterns and interpret data intelligently Students construct their knowledge of a particular topic in a real world context and then reinforce this knowledge through reflection practice and synthesis with other topics as they work through the text

Secondary Mathematics for Mathematicians and Educators Michael Weiss, 2020-10-05 In this engaging text Michael Weiss offers an advanced view of the secondary mathematics curriculum through the prism of theory analysis and history aiming to take an intellectually and mathematically mature perspective on the content normally taught in high school mathematics courses Rather than a secondary mathematics textbook Weiss presents here a textbook about the secondary mathematics curriculum written for mathematics educators and mathematicians and presenting a long overdue modern day integration of the

disparate topics and methods of secondary mathematics into a coherent mathematical theory Areas covered include Polynomials and polynomial functions Geometry graphs and symmetry Abstract algebra linear algebra and solving equations Exponential and logarithmic functions Complex numbers The historical development of the secondary mathematics curriculum Written using precise definitions and proofs throughout on a foundation of advanced content knowledge Weiss offers a compelling and timely investigation into the secondary mathematics curriculum relevant for preservice secondary teachers as well as graduate students and scholars in both mathematics and mathematics education *Fifty Years of Mathematical Physics* Molin Ge, Antti J Niemi, 2016-02-16 This unique volume summarizes with a historical perspective several of the major scientific achievements of Ludwig Faddeev with a foreword by Nobel Laureate C N Yang The volume that spans over fifty years of Faddeev's career begins where he started his own scientific research in the subject of scattering theory and the three body problem It then continues to describe Faddeev's contributions to automorphic functions followed by an extensive account of his many fundamental contributions to quantum field theory including his original article on ghosts with Popov Faddeev's contributions to soliton theory and integrable models are then described followed by a survey of his work on quantum groups The final scientific section is devoted to Faddeev's contemporary research including articles on his long term interest in constructing knotted solitons and understanding confinement The volume concludes with his personal view on science and mathematical physics in particular **Hokkaido Mathematical Journal**, 2018-02

Mathematical Reviews, 2007 *Mathematics of Computer Science, Cybersecurity and Artificial Intelligence* Cheikh Thiécoumba Gueye, Papa Ngom, Idy Diop, 2024-12-10 This proceedings book gathers selected peer reviewed papers presented at the Fifth Scientific Days of the Doctoral School of Mathematics and Computer Sciences S2DSMCS held from December 20 22 2023 at Cheikh Anta Diop University in Dakar Senegal The cutting edge works cover timely topics in cryptography cybersecurity and artificial intelligence with applications extending to fields such as telecommunications and smart networks This collection showcases research activities developed by a new generation of mathematicians and computer scientists from Africa Europe Asia and America By fostering cooperation among both young and experienced researchers the S2DSMSC conference aligns with other conferences in the region such as Africacrypt the International Conference on Cryptology in Africa the Non commutative Algebra and Operator Theory NANCAOT international workshops and the International Conference in Algebra Codes and Cryptology A2C all with proceedings published by Springer Gröbner's Problem and the Geometry of GT-Varieties Liena Colarte-Gómez, Rosa Maria Miró-Roig, 2024-10-02 This book presents progress on two open problems within the framework of algebraic geometry and commutative algebra Gröbner's problem regarding the arithmetic Cohen Macaulayness aCM of projections of Veronese varieties and the problem of determining the structure of the algebra of invariants of finite groups We endeavour to understand their unexpected connection with the weak Lefschetz properties WLPs of artinian ideals In 1967 Gröbner showed that the Veronese variety is aCM and exhibited examples of aCM and

nonaCM monomial projections Motivated by this fact he posed the problem of determining whether a monomial projection is aCM In this book we provide a comprehensive state of the art of Gr bner s problem and we contribute to this question with families of monomial projections parameterized by invariants of a finite abelian group called G varieties We present a new point of view in the study of Gr bner s problem relating it to the WLP of Artinian ideals GT varieties are a subclass of G varieties parameterized by invariants generating an Artinian ideal failing the WLP called the Galois Togliatti system We studied the geometry of the G varieties we compute their Hilbert functions a minimal set of generators of their homogeneous ideals and the canonical module of their homogeneous coordinate rings to describe their minimal free resolutions We also investigate the invariance of nonabelian finite groups to stress the link between projections of Veronese surfaces the invariant theory of finite groups and the WLP Finally we introduce a family of smooth rational monomial projections related to G varieties called RL varieties We study the geometry of this family of nonaCM monomial projections and we compute the dimension of the cohomology of the normal bundle of RL varieties This book is intended to introduce Gr bner s problem to young researchers and provide new points of view and directions for further investigations **Syzygies and Hilbert**
