Function Spaces, Theory and Applications Ilia Binder, Damir Kinzbulatov, Javad Mashreghi, 2023-12-11 The focus program on Analytic Function Spaces and their Applications took place at Fields Institute from July 1st to December 31st 2021 Hilbert spaces of analytic functions form one of the pillars of complex analysis These spaces have a rich structure and for more than a century have been studied by many prominent mathematicians They also have several essential applications in other fields of mathematics and engineering e g robust control engineering signal and image processing and theory of communication The most important Hilbert space of analytic functions is the Hardy class  $H^2$  However its close cousins e g the Bergman space  $A^2$  the Dirichlet space  $D$  the model subspaces  $K_t$  and the de Branges-Rovnyak spaces  $H(b)$  have also been the center of attention in the past two decades Studying the Hilbert spaces of analytic functions and the operators acting on them as well as their applications in other parts of mathematics or engineering were the main subjects of this program During the program the world leading experts on function spaces gathered and discussed the new achievements and future venues of research on analytic function spaces their operators and their applications in other domains With more than 250 hours of lectures by prominent mathematicians a wide variety of topics were covered More explicitly there were mini courses and workshops on Hardy Spaces Dirichlet Spaces Bergman Spaces Model Spaces Interpolation and Sampling Riesz Bases Frames and Signal Processing Bounded Mean Oscillation de Branges-Rovnyak Spaces Operators on Function Spaces Truncated Toeplitz Operators Blaschke Products and Inner Functions Discrete and Continuous Semigroups of Composition Operators The Corona Problem Non commutative Function Theory Drury-Arveson Space and Convergence of Scattering Data and Non linear Fourier Transform At the end of each week there was a high profile colloquium talk on the current topic The program also contained two semester long advanced courses on Schramm-Loewner Evolution and Lattice Models and Reproducing Kernel Hilbert Space of Analytic Functions The current volume features a more detailed version of some of the talks presented during the program

**Handbook of Sinc Numerical Methods** Frank Stenger, 2016-04-19 Handbook of Sinc Numerical Methods presents an ideal road map for handling general numeric problems Reflecting the author's advances with Sinc since 1995 the text most notably provides a detailed exposition of the Sinc separation of variables method for numerically solving the full range of partial differential equations PDEs of interest to scientists and engineers This new theory which combines Sinc convolution with the boundary integral equation IE approach makes for exponentially faster convergence to solutions of differential equations The basis for the approach is the Sinc method of approximating almost every type of operation stemming from calculus via easily computed matrices of very low dimension The downloadable resources of this handbook contain roughly 450 MATLAB programs corresponding to exponentially convergent numerical algorithms for solving nearly every computational problem of science and engineering While the book makes Sinc methods accessible to users wanting to bypass the complete theory it also offers sufficient theoretical details for readers who do want a full working understanding of this exciting area of numerical analysis
