**Mathematical Intelligence** Junaid Mubeen,2022-06-02 There s so much talk about the threat posed by intelligent machines that it sometimes seems as though we should surrender to our robot overlords But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over machines because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse maths Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical superpowers

**Branding Authoritarian Nations** Petra Alderman,2023-07-28 Branding Authoritarian Nations offers a novel approach to the study of nation branding as a strategy for political legitimation in authoritarian regimes using the

example of military ruled Thailand The book argues that nation branding is a political act that is integral to state legitimation processes particularly in the context of authoritarian regimes It applies its alternative reading of nation branding to eight different sectors tourism economy foreign direct investment foreign policy education culture public relations and the private sector The author explains that nation branding produces specific kinds of applied national myths referred to as strategic national myths She shows that nation branding is an inherently inward looking strategy aimed at shaping the social attitudes and behaviours of the nation s citizens in line with the government s domestic agenda and legitimation needs Providing the first comprehensive analysis of nation branding in Thailand and the first book length account of the country s political developments since the 2014 2019 military rule the book is primarily aimed at academics in the disciplines of politics international relations communication and area studies as well as business cultural and intercultural studies

Peter Bright,Roberto Filippi,2019-09-05 The claim that multilanguage acquisition drives advantages in executive function is currently an issue of vigorous debate in academic literature Critics argue that evidence for this advantage has been confounded by unsound or questionable methodological practices with some investigators abandoning research in this area altogether indicating either that there is no bilingual advantage or that it is impossible to capture and therefore rule out alternative explanations for group differences Over the past decade and against this backdrop theory has developed from a relatively narrow focus on inhibitory control to incorporate theory of mind rule based learning reactive and proactive control visuo spatial memory and control of verbal interference in speech comprehension Most recently authors have claimed that the process of becoming bilingual may also impact on metacognitive abilities The fundamental issue is whether the limited capacity and goal directed selectivity of our executive system can somehow be enhanced or otherwise profit from the continuous intense competition associated with communicating in multilingual environments However although this issue has received much attention in academic literature the question of which cognitive mechanisms are most influenced by the enhanced competition associated with multilingual contexts remains unresolved Therefore rather than dismissing this important topic we advocate a more systematic approach in which the effects of multilinguistic experience are assessed and interpreted across well defined stages of cognitive development We encourage a broad developmentally informed approach to plotting the trajectory of interactions between multi language learning and cognitive development using a convergence of neuroimaging and behavioral methods across the whole lifespan Moreover we suggest that the current theoretical framing of the bilingual advantage is simplistic and this issue may limit attempts to identify specific mechanisms most likely to be

modulated by multilingual experience For example there is a tendency in academic literature to treat executive function as an essentially unitary fronto parietal system recruited in response to all manner of cognitive demand yet performance across so called executive function tasks is highly variable and intercorrelations are sometimes low It may be the case that some higher level mechanisms of executive function remain relatively unaffected while others are more sensitive to multilingual experience and that there may be disadvantages as well as advantages which themselves may be sensitive to factors such as age In our view there is an urgent need to take a more fine grained approach to this issue so that the strength and direction of changes in diverse cognitive abilities associated with multilanguage acquisition can be better understood This book compiles work from psychologists and neuroscientists who actively research whether how and the extent to which multilanguage acquisition promotes enhanced cognition or protects against age related cognitive or neurological deterioration We hope this collection encourages future efforts to drive theoretical progress well beyond the highly simplistic issue of whether the bilingual cognitive advantage is real or spurious
