

Notes on Exploring Sine and Cosine Graphs Learning Task

Supplies:

Graphing calculators or a graphing utility on a computer.

Notes:

This task is designed to give students a chance to explore and make conjectures about the nature of the sine and cosine graphs. They are looking specifically for the following features: amplitude, period, frequency, horizontal shifts and phase shifts. They will continue to analyze graph features like x and y intercepts, domain and range, and maximum and minimum values.

Students are encouraged to develop these ideas by developing charts of data values and by using graphing technology. Students are not expected to create all of these graphs by hand. This is especially true for a problem like #9. While it is important for students to be able to create a graph of the trigonometric functions by hand, this should be done after they are able to identify the key features of the graph and can use these features to create the graph.

Throughout these tasks students are asked to use radians and degrees. They need to develop fluidity in thinking about measuring angles using either of these units.

Exploring Sine and Cosine Graphs Learning Task

In the previous task you used your calculator to model periodic data using a sine graph. Now you will explore the sine, cosine, and tangent graphs to determine the specific characteristics of these graphs.

- 1. Using your knowledge of the unit circle, complete the following chart for $f(x)=\sin x$. (Use exact values.)**
