

EXXONMOBIL OPERATIONS SELECTION BATTERY PRACTICE TEST

This practice test gives you an opportunity to respond to the types of questions contained in the ExxonMobil Operations Pre-employment Selection Battery. The test battery is made up of five tests. Each test measures a different ability, or set of skills, that has been shown to be necessary to perform ExxonMobil Operations jobs. All of the tests contain multiple-choice questions, with four response options, labeled A, B, C, and D. The correct answers are provided on the last page for you to check your answers. When you attend the test session, you will mark your answers on a separate answer sheet. Brief descriptions of the five tests and sample questions are provided below.

Reading Comprehension

This is a test of your ability to read and understand written materials related to work activities. The test contains a number of reading passages about various topics. Each passage is followed by several questions that can be answered based on the information contained in the passage. These questions focus on recognizing facts, defining words in context, and identifying major themes.

Soil is a non-homogenous blend of many materials. There are many factors that need to be considered when digging trenches in soil. To analyze the stability of unsupported trenches, the method selected will depend on the critical nature of the project, economics, and the amount of time available for design. For shallow utility line excavations, where time and economics are at a premium, a rapid technique for evaluating the critical depth and the maximum safe slope is required. The maximum safe slope is identified as the "angle of repose." The use of stability charts or tables coupled with a few simple equations is the most efficient approach.

1. According to the passage, which of the following is **true** of soil?
 - a. It is made up of only one type of material.
 - b. Research has not determined what it is made up of.
 - c. It is made up of different types of material.
 - d. The time of year changes its composition.

2. In a situation where economics and time are critical, which technique is recommended in the passage?
 - a. Stability charts and equations
 - b. Whatever cost the least
 - c. Whatever is fastest
 - d. Evaluation of critical depth only
