**Spray-Freeze-Drying of Foods and Bioproducts** S. Padma Ishwarya, 2022-04-19 Spray freeze drying SFD is a synergistic drying technology that imbibes in it the merits of both spray drying and freeze drying whilst overcoming the limitations of these predecessor technologies SFD produces uniquely powdered food and pharmaceutical products with porous microstructure and superior quality attributes Owing to its atomization step and ultra low temperature operation SFD is a competent drying technique for the production of valuable but sensitive bioactive components Despite the costs and complexities involved SFD has a competitive edge over the conventional drying techniques in providing distinctive product attributes The applications of spray freeze drying in the area of food and bioproducts span across the product categories of instant food powders dry flavors active pharmaceutical ingredients poorly water soluble drugs probiotics proteins enzymes and vaccines Spray Freeze Drying of Foods and Bioproducts Theory Applications and Perspectives is the first exclusive title on this interesting drying technique It provides a comprehensive understanding of the fundamentals of SFD and its food and pharmaceutical applications The scope of this book comprising 12 chapters has been organized under four major headings fundamentals of process stages applications with case studies recent advancements and the processing bottlenecks and solutions Key Features Provides examples and case studies of nuances and intricacies associated with each stage of the spray freeze drying process Highlights the applications of spray freeze drying in the production of food products including soluble coffee dairy powders probiotics and flavors Serves as a ready reckoner of characterization methods for spray freeze dried products Contains 200 illustrations and tabulations The contents of this book are organized to cater to the knowledge needs of students academicians researchers and professionals in the food and pharmaceutical industry

**21st European Symposium on Computer Aided Process Engineering** E. N. Pistikopoulos, Michael C. Georgiadis, Antonis C. Kokossis, 2011-07-21 The European Symposium on Computer Aided Process Engineering ESCAPE series presents the latest innovations and achievements of leading professionals from the industrial and academic communities The ESCAPE series serves as a forum for engineers scientists researchers managers and students to present and discuss progress being made in the area of computer aided process engineering CAPE European industries large and small are bringing innovations into our lives whether in the form of new technologies to address environmental problems new products to make our homes more comfortable and energy efficient or new therapies to improve the health and well being of European citizens Moreover the European Industry needs to undertake

research and technological initiatives in response to humanity's Grand Challenges described in the declaration of Lund namely Global Warming Tightening Supplies of Energy Water and Food Ageing Societies Public Health Pandemics and Security Thus the Technical Theme of ESCAPE 21 will be Process Systems Approaches for Addressing Grand Challenges in Energy Environment Health Bioprocessing Nanotechnologies

*Environmental Hydraulics. Volume 1* Georgos C. Christodoulou, Anastasios I. Stamou, 2022-03-07 Over the last two decades environmental hydraulics as an academic discipline has expanded considerably caused by growing concerns over water environmental issues associated with pollution and water balance problems on regional and global scale These issues require a thorough understanding of processes related to environmental flows and transport phenomena and the development of new approaches for practical solutions Environmental Hydraulics includes about 200 contributions from 35 countries presented at the 6th International Symposium on Environmental Hydraulics Athens Greece 23-25 June 2010 They cover the state of the art on a broad range of topics including fundamentals aspects of environmental fluid mechanics environmental hydraulics problems of inland coastal and ground waters interfacial processes computational experimental and field measurement techniques ecological aspects and effects of global climate change Environmental Hydraulics will be of interest to researchers civil environmental engineers and professional engineers dealing with the design and operation of environmental hydraulic works such as wastewater treatment and disposal river and marine constructions and to academics and graduate students in related fields

*Biological Flow Modelling* Suvash C. Saha, Akshoy Ranjan Paul, 2025-10-28 The book on Biological Flow Modelling is a pioneering exploration at the intersection of biomedical engineering and computational fluid dynamics It masterfully investigates into the complexities of bio fluid phenomena from intricate airway structures and cardiovascular biomechanics to advanced drug delivery systems and neurological fluid dynamics By integrating cutting edge simulations and clinical insights it not only advances our understanding of physiological and pathological processes but also paves the way for innovative healthcare solutions This comprehensive anthology showcases authors collective expertise and vision offering readers a profound perspective on the dynamic interplay between fluids and biological systems

**Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment** Umer Afzal, 2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without

emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts
