Chen, Chunyang Chen, 2008-12-10 OpenGL which has been bound in C is a seasoned graphics library for scientists and engineers As we know Java is a rapidly growing language becoming the de facto standard of Computer Science learning and application development platform as many undergraduate computer science programs are adopting Java in place of C C Released by Sun Microsystems in June 2003 the recent OpenGL binding with Java JOGL provides students scientists and engineers a new venue of graphics learning research and applications Overview This book aims to be a shortcut to graphics theory and programming in JOGL Specifically it covers OpenGL programming in Java using JOGL along with concise computer graphics theories It covers all graphics basics and several advanced topics without including some implementation details that are not necessary in graphics applications It also covers some basic concepts in Java programming for C C programmers It is designed as a textbook for students who know programming basics already It is an excellent shortcut to learn 3D graphics for scientists and engineers who understand Java programming It is also a good reference for C C graphics vi Preface programmers to learn Java and JOGL This book is a companion to Guide to Graphics Software Tools Springer Verlag New York ISBN 0 387 95049 4 which covers a smaller graphics area with similar examples in C but has a comprehensive list of graphics software tools Organization and Features This book concisely introduces graphics theory and programming in Java with JOGL Interactive Web-Based Virtual Reality with Java 3D Ko, Chi Chung, Cheng, Chang Dong, 2008-07-31 This book provides both advanced and novice programmers with comprehensive detailed coverage of all of the important issues in Java 3D Provided by publisher **Computational Science - ICCS 2002** Peter M.A. Sloot, C.J. Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01 Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems The area of application includes natural systems such as biology environmental and geo sciences physics and chemistry and synthetic systems such as electronics and financial and economic systems The discipline is a bridge between classical computer science logic complexity architecture algorithms mathematics and the use of computers in the aforementioned areas The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field For instance new models and methods to study environmental issues like the

quality of air water and soil and weather and climate predictions through simulations as well as the simulation supported development of cars airplanes and medical and transport systems etc Paraphrasing R Kenway R D Kenway Contemporary Physics 1994 There is an important message to scientists politicians and industrialists in the future science the best industrial design and manufacture the greatest medical progress and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science Nowadays we have access to high end computer architectures and a large range of computing environments mainly as a consequence of the enormous stimulus from the various international programs on advanced computing e g **Java, Late Objects Version** Paul J.
