Natural Language Processing and Information Systems Zoubida Kedad, Nadira Lammari, Elisabeth Métais, Farid Meziane, Yacine Rezgui, 2007-08-15 This book constitutes the refereed proceedings of the 12th International Conference on Applications of Natural Language to Information Systems NLDB 2007 held in Paris France in June 2007 It covers natural language for database query processing email management semantic annotation text clustering ontology engineering natural language for information system design information retrieval systems and natural language processing techniques **Text Analysis Pipelines** Henning Wachsmuth, 2015-12-02 This monograph proposes a comprehensive and fully automatic approach to designing text analysis pipelines for arbitrary information needs that are optimal in terms of run time efficiency and that robustly mine relevant information from text of any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines **Mining Complex Data** Zbigniew W. Ras, 2008-05-26 This book constitutes the refereed proceedings of the Third International Workshop on Mining Complex Data MCD 2007 held in Warsaw Poland in September 2007 co located with ECML and PKDD 2007 The 20 revised full papers presented were carefully reviewed and selected they present original results on knowledge discovery from complex data In contrast to the typical tabular data complex data can consist of heterogenous data types can come from different sources or live in high dimensional spaces All these specificities call for new data mining strategies Formal Methods and Software Engineering Jin Song Dong, Huibiao Zhu, 2010-11-09 This book constitutes the refereed proceedings of the 12th International Conference on Formal Engineering Methods ICFEM 2010 held in Shanghai China November 2010 The 42 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 114 submissions The papers address all current issues in formal methods and their applications in software engineering They are organized in topical sections on theorem proving and decision procedures web services and workflow verification applications of formal methods probability and concurrency program analysis model checking object orientation and model driven engineering as well as specification and verification **Web, Artificial Intelligence and Network Applications** Leonard Barolli, Makoto

Takizawa, Fatos Xhafa, Tomoya Enokido, 2019-03-14 The aim of the book is to provide latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of Web Computing Intelligent Systems and Internet Computing As the Web has become a major source of information techniques and methodologies that extract quality information are of paramount importance for many Web and Internet applications Data mining and knowledge discovery play key roles in many of today's prominent Web applications such as e-commerce and computer security Moreover the outcome of Web services delivers a new platform for enabling service-oriented systems The emergence of large scale distributed computing paradigms such as Cloud Computing and Mobile Computing Systems has opened many opportunities for collaboration services which are at the core of any Information System Artificial Intelligence AI is an area of computer science that build intelligent systems and algorithms that work and react like humans The AI techniques and computational intelligence are powerful tools for learning adaptation reasoning and planning They have the potential to become enabling technologies for the future intelligent networks Recent research in the field of intelligent systems robotics neuroscience artificial intelligence and cognitive sciences are very important for the future development and innovation of Web and Internet applications *Learn By Examples - A Quick Guide to C# Programming* Eric M. H. Incremental Construction of Code Property Graphs Samuel Hopstock, 2021-11-17 Master s Thesis from the year 2021 in the subject Computer Science IT Security grade 2 0 Technical University of Munich Department of Informatics language English abstract This thesis extends a modified CPG approach that is able to operate on multiple programming languages i e C C Java Python and Golang available on GitHub3 Fra21a Graph based code analysis systems are versatile tools for reasoning about the correctness of complex software projects One area in which they are widely used is in source code auditing Security vulnerabilities for example using cryptographic functions with insecure algorithms can be introduced by coding patterns that spread over the boundaries of several methods classes or even files in the project This is where graph based analysis makes finding these vulnerabilities easier by creating a framework where the source code can be represented as a graph and vulnerable **Windows Magazine** ,1997 **Data Structures and Algorithm Analysis in Java** Mark Allen Weiss, 2007 As the speed and power of computers increases so does the need for effective programming and algorithm analysis By approaching these skills in tandem Mark Allen Weiss teaches readers to develop well constructed maximally

efficient programs in Java A full language update to Java 5 0 throughout the text particularly its use of generics adds immeasurable value to this advanced study of data structures and algorithms This Second Edition features integrated coverage of the Java Collections Library as well as a complete revision of lists stacks queues and trees Weiss clearly explains topics from binary heaps to sorting to NP completeness and dedicates a full chapter to amortized analysis and advanced data structures and their implementation Figures and examples illustrating successive stages of algorithms contribute to Weiss careful rigorous and in depth analysis of each type of algorithm A logical organization of topics and full access to source code compliment the text s coverage

Journal of Information Science ,2000 Principles practice C/C++ Users Journal ,2003 Proceedings ,2006 **Software and CD-ROM Reviews on File** ,1998 **Robust Graph-Based Static Code Analysis** Samuel Hopstock,2019-11-14 Bachelor Thesis from the year 2019 in the subject Computer Science IT Security grade 1 0 Technical University of Munich Fakult t f r Informatik language English abstract The topic of this thesis is to develop a graph based static analysis framework for Java code that tolerates incomplete or non compiling source code For this purpose the concept of Code Property Graphs CPGs is to be researched and extended in order to provide information about more complex erroneous patterns in Java source code Additionally an evaluation of the resulting graph model is to be performed by searching for cryptographic vulnerabilities in publicly available Java projects This evaluation needs to show whether this graph based analysis approach is capable of finding security issues in Java code and how feasible the analysis is from a performance point of view Automatic code analysis is a widely used technique to find and eliminate errors in software projects Instead of executing the program and verify that its behavior is correct as dynamic analysis does it static analysis is applied on its source code Here we search for suspicious patterns that are likely to indicate erroneous behavior A special type of software bugs are those errors that lead to security vulnerabilities In this case attackers may be able to undermine fundamental security aspects by exfiltrating sensitive user data from server applications or assume control over the machine running the program in question Security vulnerabilities in the code can have drastic consequences which is why it is important to identify them as fast as possible and fix them immediately afterwards This thesis extends the concept of Code Property Graphs CPGs which has been proposed for static analysis of C C code to be applied on programs and incomplete code snippets written in Java Unifying Abstract Syntax Trees ASTs Control Flow Graphs CFGs and Data Flow Graphs DFGs in a single datastructure this approach enables searching for vulnerabilities whose code patterns are spread out across the boundaries of single methods and classes These patterns are identified using the graph query language cypher which is provided by the graph database Neo4j In an evaluation run on 100 public repositories on GitHub using cryptography 135 findings of cryptographic API misuse have been identified using this technique These include the use of insecure algorithms like the Data Encryption Standard DES or Electronic Code Book mode ECB and hardcoded passwords that are used for encryption purposes This thesis has been created in cooperation with Fraunhofer AISEC **Java Report** ,2001
