Javascript C

- Javascript is a high-level, dynamic, interpreted language widely used to create interactive content. Alongside HTML and CSS, it is one of the three core technologies of the World Wide Web.
- Brendan Eich created Javascript in 1995 at Netscape Communications. It was originally named "LiveScript", and finally "JavaScript".

Key Features

Client-side language: Primarily used to add interactivity and provide dynamic functionality to web pages.

Event-driven: Javascript can respond to user actions, such as clicks, mouseovers, and keyboard input, allowing for interactive web pages.

Prototype-based: Javascript uses prototype-based object-oriented programming, allowing objects to inherit properties and methods from other objects, providing a flexible and dynamic approach to class creation.

Weakly typed: Javascript is a weakly typed language, meaning that variables can hold values of different data types without explicit casting.

Asynchronous programming: Javascript can execute code asynchronously, allowing for non-blocking operations and improving the user experience by preventing the main execution thread from being blocked.
