**Stream Restoration in Dynamic Fluvial Systems** Andrew Simon, Sean J. Bennett, Janine M. Castro, 2013-05-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 194 *Stream Restoration in Dynamic Fluvial Systems Scientific Approaches Analyses and Tools* brings together leading contributors in stream restoration science to provide comprehensive consideration of process based approaches tools and applications of techniques useful for the implementation of sustainable restoration strategies Stream restoration is a catchall term for modifications to streams and adjacent riparian zones undertaken to improve geomorphic and or ecologic function structure and integrity of river corridors and it has become a multibillion dollar industry A vigorous debate currently exists in research and professional communities regarding the approaches applications and tools most effective in designing implementing and

assessing stream restoration strategies given a multitude of goals objectives stakeholders and boundary conditions More importantly stream restoration as a research oriented academic discipline is at present lagging stream restoration as a rapidly evolving practitioner centric endeavor The volume addresses these main areas concepts in stream restoration river mechanics and the use of hydraulic structures modeling in restoration design ecology ecologic indices and habitat geomorphic approaches to stream and watershed management and sediment considerations in stream restoration Stream Restoration in Dynamic Fluvial Systems will appeal to scholars professionals and government agency and institute researchers involved in examining river flow processes river channel changes and improvements watershed processes and landscape systematics [Environmental Hydraulics.
