The "Vertical" Generalization of Goldbach's Conjecture - An Infinite Class of Conjectures Stronger than Goldbach's Andrei-Lucian Drăgoi, 2021-07-30 This work proposes the generalization of the binary strong Goldbach's Conjecture briefly called the Vertical Binary Goldbach's Conjecture which is essentially a meta conjecture because it states an infinite number of conjectures stronger than Goldbach's which all apply on iterative primes with recursive prime indexes with many potential theoretical and practical applications in mathematics and physics and a very special self similar property of the primes subset of positive integers

JavaScript Security Essentials Amara Hawthorn, 2025-06-28 In today's digital world JavaScript powers everything from interactive user interfaces to full stack web applications But with its growing reach comes increased vulnerability JavaScript Security Essentials is your ultimate guide to writing secure reliable and resilient code whether you're working on the client side the server side or both This practical handbook cuts through complexity to deliver proven security techniques tailored for modern JavaScript environments including Node.js Express React and beyond From protecting against common attacks like Cross Site Scripting XSS and SQL Injection to mastering advanced concepts such as Content Security Policies CSP and secure authentication flows this book empowers developers to defend applications at every layer Inside you'll discover how to Harden both front end and back end code with battle tested security practices Prevent XSS CSRF Injection attacks Clickjacking and other critical threats Secure REST APIs JSON Web Tokens JWT and third party integrations Implement best practices for authentication authorization and session management Leverage security features in modern frameworks like React Vue and Angular Write safer server side JavaScript with Node.js Express and database layers Understand secure DevOps workflows and runtime protection strategies

Whether you're a seasoned JavaScript engineer, a full stack developer, or a security-conscious beginner, *JavaScript Security Essentials* equips you with the knowledge and tools to build secure, scalable, and trusted applications. Stop vulnerabilities before they happen. Code with confidence. Defend your stack. *Security for Web Developers* John Paul Mueller, 2015-11-10

As a web developer, you may not want to spend time making your web app secure, but it definitely comes with the territory. This practical guide provides you with the latest information on how to thwart security threats at several levels, including new areas such as microservices. You'll learn how to help protect your app, no matter where it runs, from the latest smartphone to an older desktop and everything in between. Author John Paul Mueller delivers specific advice, as well as several security programming examples, for developers with a good knowledge of CSS3, HTML5, and JavaScript. In five separate sections, this book shows you how to protect against viruses, DDoS attacks, security breaches, and other nasty intrusions. Create a security plan for your organization that takes the latest devices and user needs into account. Develop secure interfaces and safely incorporate third-party code from libraries, APIs, and microservices. Use sandboxing techniques in-house and third-party testing techniques, and learn to think like a hacker. Implement a maintenance cycle by determining when and how to update your application software. Learn techniques for efficiently tracking security threats, as well as training requirements that your organization can use. *Studying JavaScript Security Through Static Analysis* Aurore Fass, 2020

Language-based Security for Web Browsers Dongseok Jang, 2014

Web browsers are one of the most security-critical applications that billions of people use to access their private information, ranging from bank statements to medical records. However, we have witnessed numerous browser security vulnerabilities that allow attackers to steal this information or hijack a user's machine in the last decade. Many of these security vulnerabilities are rooted in the lack of security support from programming languages used in browsers. First, JavaScript, the browser-side scripting language, lacks flexible language constructs to isolate code originating from different websites, despite the common practice of merging JavaScript programs from untrusted sources into one web page. As a result, JavaScript attacks have affected numerous sites. Second, C, the language in which major browsers are implemented, does not guarantee memory safety. As a result, memory corruption attacks are prevalent in browsers. In the worst scenario, memory corruption attacks can hijack a user's machine. Third, due to the lack of reasoning support, C makes it challenging to implement correct and thorough security policies in browsers comprising millions of lines of code. Loopholes in implementations have thus been exploited to circumvent intended security measures. These factors suggest that we can retrofit these languages with security-relevant constructs or incorporate a security-oriented language to address these problems. This dissertation argues that we can adapt language techniques to improve browser security. To support this argument, we present the following contributions: First, we present a dynamic information flow framework for JavaScript to detect and prevent data-stealing attacks in JavaScript web applications. Second, we present SafeDispatch, an enhanced C compiler that prevents C control flow hijacking attacks, a class of attacks that exploit vtable

pointers in the browser Third we present Quark a browser with a kernel formally verified to satisfy crucial security properties even when another browser component is compromised We highlight experimental results showing that each of our contributions is a practical defense mechanism against various browser security problems We have implemented our proposals in real browsers such as Chromium and Webkit and showed that they successfully run on real websites including Google Amazon and Facebook
