Green Technology is an eight volume set that examines the relationship between human activities and their sometimes harmful consequences for the environment and explores new methods of repairing and restoring the Earth. Approaching environmental issues confronting society from a technological perspective has spawned significant controversy and the books in this set present all sides of the debate. Designed to complement science curricula, the set also covers relevant history and new green technologies and innovations that will contribute to the field in the future. *Environmental Engineering: Designing a Sustainable Future* examines how this field, which incorporates not only aspects of art and design but also physics, geology, ecology, and the chemistry of matter, evolved from a discipline of civil engineering. Environmental engineers learn how to work with nature to improve and control the quality of the land, air, and water for the benefit of human and nonhuman cohabitation. Sidebars, figures, and case studies enhance fundamental concepts and examine urgent issues related to the natural future of the environment. The volume includes information on aerodynamics, ecological and energy architecture, energy efficient electronics, innovations in personal vehicles, landscape design, microclimates, solar homes, sustainable manufacturing, transit systems, and wastewater. The book contains 50 color photographs and line illustrations, five appendixes, a glossary, a detailed list of print and Internet resources, and an index. *Green Technology* is essential for high school students, teachers, and general readers who seek information on the important issues that affect the environment worldwide. Book jacket Big Book of Self-Reliant Living Walter Szykitka, 2009-10-14. Rural homesteaders and urban apartment dwellers alike will find a mother lode of practical information packed into this completely revised and updated edition of the ultimate how-to handbook for all generations. A selective compendium of public domain documents, it brings together in one volume a wealth of knowledge and useful instruction on just about every imaginable aspect of self-sufficiency: from building a dwelling and growing food to raising children, using tools of all kinds, and yes, getting more mileage out of your car. Readers will learn how to build a greenhouse, administer first aid, stock an emergency shelter, survive in the wilderness, at sea, and in the city; plant, buy, farmland, grow plants indoors and out; read architect's drawings; care for household pets; repair clothing, hunt, trap, and fish; repair a screen or leaking faucet; butcher and store big game; kill, relieve allergy symptoms, control insects; stay safe during storms and floods; can and freeze fruits and vegetables; take your own blood pressure; and much, much more. Praise for a previous edition: How we have survived this long without this book, I don't know. The concept is brilliant and simple. If we had lived in a rural community a century ago, much of the knowledge gathered here would have been in our bones. Harper's
