

Module 8 Magnetism

What this module is about

Everybody is familiar with a toy magnet, that mysterious little U-shaped device that picks up needles or pins and holds them indefinitely in what seems to be like magic. As a child you probably played with small magnets. But magnet is far from being a mere toy. It is an essential part of machines, tools and some measuring devices. You have heard of a magnetic compass that helps navigators keep their course at sea. When you hold a phone receiver to your ear, a magnet records the vibrations set up by the voice of the person talking at the other end. Electric motors also contain magnets to function. Particle accelerators like cyclotron contain thousand of magnets as well.

Electricity and magnetism cannot be separated. Magnetism plays an important role in the study of electricity. Whenever electric current appears, there is magnetism. The operation of many electrical devices such as radios, TV sets, motors and other devices depends on the magnetic effects of electric current.

This module presents the discovery of magnetism and some of the fundamental experiments and laws showing the relationship between electricity and magnetism. In reading this module, you should pay attention to the nature of the force exerted on moving charges by a magnetic field. In addition, you need to understand the way in which an electric current produces a magnetic field. You will also learn how two important current-carrying shapes of wire: a long straight wire and a circular loop or solenoid produce magnetic field.

This module discusses the following topics:

- **Lesson 1 - Discovery of Magnetism**
- **Lesson 2 - Magnets and Magnetic Field**
- **Lesson 3 - Electromagnetism**

Read this module and see the wonders of electricity and magnetism and their contributions to the world of technology.

So, start and enjoy.
