America's Most Vulnerable Coastal Communities Joseph T. Kelley, Orrin H. Pilkey, J. A. G. Cooper, 2009-01-01 Sea level is rising and yet Americans continue to develop beaches with little regard. In this volume a group of coastal geologists discusses the startling saga of ten U.S. East and Gulf Coast shoreline communities plus Puerto Rico and some western Europe strands and the problems created by their inevitable interaction with natural processes in this highly dynamic geologic environment. The authors discuss the geologic context of the hazards of each site as the history of societal responses and their environmental impacts. Response to the natural coastal processes that threaten lives and buildings is carried out in a context of local state and national politics with fixed short term engineering solutions: beach replenishment, seawalls generally favored over longer term approaches: moving back, prohibition of seawalls. This essential GSA Special Paper foreshadows the impending rise of sea level and the myriad of shoreline responses and political controversies it will provoke. Publisher's description

Developing Pavement Performance Prediction Models and Decision Trees for the City of Cincinnati Arudi Rajagopal, 2006 This report presents the details of a study conducted to develop pavement performance prediction models and decision trees for various families of pavements using the data available with the City of Cincinnati. Required data was acquired from city's pavement inventory database. The road network was divided into two classifications: namely major roads and minor roads. These roads were further grouped based on their structural makeup. Statistical regression models were developed for each group. A decision tree was developed to suggest appropriate maintenance and rehabilitation activities based on the condition of the pavement. The city engineers can use these models in conjunction with their pavement management system to predict the future condition of the highway network in Cincinnati and to implement cost effective pavement management solutions. Using the methodology developed in this study the engineers can also further improve the accuracy of the models in the future.
