

Question 1

The fear of negative evaluation (FNE) scores for 11 female students known to suffer from the eating disorder bulimia and 14 female students with normal eating are reported in the next table. Assume that each sample is a simple random sample from female student population and the two samples are independent from each other.

Bulimic Students	21	13	10	20	25	19	16	21	24	13	14			
Normal students	13	6	16	13	8	19	23	18	11	19	7	10	15	20

- For each sample, produce a histogram, and a box plot using R. Carefully examine each plot with regards to outliers, symmetry, and modes. Also produce a normal probability plot and comment on the general pattern of the plot and the p-value. Provide a short summary of your findings for each sample. Based on your findings give an evaluation of how well each sample agrees with the normality assumption.
- Construct and interpret a 95% two sample t-confidence interval for the difference of the mean scores of the two groups.
- Based on your analysis in part (a), is there any concern regarding the reliability of the confidence interval produced by the two sample t-procedure. Explain your rationale.
- Do you think it is reasonable to assume that the standard deviations of the two populations are equal? Apply Levene's test to see if there is any evidence against the equal standard deviations. Do your findings depend on the normality assumption in any way?
- Construct and interpret a 95% pooled two sample t confidence interval, and compare it to the confidence interval you found in part b. Which confidence interval would you recommend to use? Explain your rationale.

Question 2

(Textbook problem 9.23) To determine the amount of a drug in tablets, twenty five tablets were produced at each of two different independent sites. Drug concentrations (measured as a percentage) for the tablets are given in the file Tablet.csv in the Data sets folder at D2L. We would like to perform a hypothesis test to see if there is a difference in the average drug content of the tablets produced at these two different sites.

- For each sample, produce a histogram, and a box plot using R. Carefully examine each plot with regards to outliers, symmetry, and modes. Also produce a normal probability plot and comment on the general pattern of the plot and the p-value. Provide a short summary of your findings for each sample. Based on your findings give an evaluation of
