Small Boat Building Tim Weston, 2018-09-27 Get started with your next home project Build yourself a boat Playing around on the water in a small boat is a lot of fun But what makes it even more special is when you built the boat yourself Building a boat is different from other woodworking projects Once finished and in the water a boat comes alive When you launch a boat you will find she has a personality of her own the way she handles on the water and moves at speed Each hull is different Creating a craft that will take you places and protect you from the elements as you go is extremely rewarding It s easy to fall in love with a boat And building a small boat is easier than you think With tools you probably already have at home and a small amount of inexpensive material you can be on the water in no time and without spending a lot of money In the book you ll learn How to build a boat from anybody s plans Design considerations size and hull shape What tools you need What materials are most suitable for creating a boat at home Safety how to work safely so you can go on to build more How to paint and protect your boat Best practices for working with epoxy resin and fillers Boat builder and marine engineer Tim Weston explains in easy to understand terms all you need to know to prepare for and get started building yourself a boat even if you ve never built anything before A practical step by step guide to building wooden boats Written for the first time builder and full of in depth technical information for the experienced builder too

An Introduction to Wooden Boat Building Thad Danielson, 2020-08-20 My fascination with floating in a boat and working with wind and water to travel the watery world led me to building boats This interest stirs in people around the world For thousands of years wooden boats have been successfully built and operated on the waters that surround us Often the builders of these boats worked to preserve jealously guarded crafts Today marketing has left these crafts free to all who would apply their hands to tools and create vessels of their own In this book I present the processes followed to build a Norwegian Pram and an Arthur Spurling rowboat along with discussion and anecdote on the impetus and skills that make building these and other boats possible The pram a lapstrake boat with transoms at both ends built without plans is the simplest of vessels built with techniques perfected by Vikings 1000 years ago The lapped method of plank fashioning and fastening described can be used for a wide range of other designs Arthur Spurling built hundreds of rowboats that were treasured by their users on the coast of his native Maine The building process described will produce a fine rowing boat but can also be used in the construction of any other boat built to plans Everyone comes to projects like these from their own perspective with their own experience and resources Even the simplest boat is a complex construction of varied parts Square rarely occurs in boats fair and fit rule Fair means smooth in line and surface without sharp bends Sound wood bends in fair curves making the creation of beautiful wooden boats seem natural Fit means the parts come together tight and evenly Shapes needed to join with another are

patterned for through one or another method of spiling establishing the shape of a curve Cutting and finishing wood to match the shape needed for fit calls sharp knives in the form of saws planes and chisels Boat building woods are not the easiest to find these days but wherever trees grow there are still people cutting them and turning logs into lumber Finding these sources and using available wood to build your boat presents challenges but pleasurable and interesting challenges Besides the building processes I tell something of the experience I have had leading me and guiding me through the building of boats This book will be a guide to you but you will find other guides for yourself not least by thinking your own way through the process of building your boat Have fun
