

ASE A6 Test Prep – Electrical/Electronic Systems

Adding an additional path through which the current can flow has decreased the total resistance of the circuit. Each light drops 12 volts.

An ohmmeter is being used to check a circuit for continuity. Technician A says an infinity or full scale reading on an ohmmeter indicates no continuity. Technician B says a zero reading on an ohmmeter indicates continuity. Who is right?

- A. Technician A only
- B. Technician B only
- C. Both A and B
- D. Neither A or B

Both technicians are right. An infinity reading indicates an open wire; a zero or low reading indicates a good connection.

Neither of the low beam headlights on a vehicle will light but the high beams work normally. Technician A says the headlight thermal breaker could be faulty. Technician B says the dimmer switch may be faulty. Who is right?

- A. Technician A only
- B. Technician B only
- C. Both A and B
- D. Neither A or B

The headlight switch and breaker would also affect the high beams. The dimmer switch would affect both low beam headlights.

The front and rear turn signals on the left side of a vehicle are non-functional. Technician A says the turn signal flasher could be shorted to ground. Technician B says the hazard flasher could be shorted to ground. Who is right?

- A. Technician A only
- B. Technician B only
- C. Both A and B
- D. Neither A or B

Neither technician is right. The flasher or fuses would affect both right and left sides. The most likely cause is two bad bulbs, a defective turn signal switch or a problem in the wiring that is common to the front and rear on the left side of the vehicle.

A circuit is wired in series. Technician A says the total of all voltage drops will equal the battery voltage. Technician B says the current flow through each part of the circuit is the same. Who is right?

- A. Technician A only
- B. Technician B only
- C. Both A and B
- D. Neither A or B
