Environmental Biotechnology: For Sustainable Future

Ranbir Chander Sobti, Naveen Kumar Arora, Richa Kothari, 2018-12-06 Environmental sustainability is one of the biggest issues faced by the mankind. Rapid rampant industrialization has put great pressure on the natural resources. To make our planet a sustainable ecosystem habitable for future generations provide equal opportunity for all the living creatures we not only need to make corrections but also remediate the polluted natural resources. The low input biotechnological techniques involving microbes and plants can provide the solution for resurrecting the ecosystems. Bioremediation and biodegradation can be used to improve the conditions of polluted soil and water bodies. Green energy involving biofuels have to replace the fossil fuels to combat pollution global warming. Biological alternatives bioinoculants have to replace harmful chemicals for maintaining sustainability of agro ecosystems. The book will cover the latest developments in environmental biotech so as to use in clearing and maintaining the ecosystems for sustainable future.

These three spheres have biotic and abiotic components which exhibit ecological homeostasis that provides the most appropriate survival chances for the members of biotic component and geochemical balance with abiotic components. This ecosystem is subjected to relatively harsh conditions mostly created by the disastrous activities due to natural calamities and intentional and or accidental anthropogenic activities. Biotechnology has become a potential tool to dissipate such environmental impacts because of the advancement it has undergone recently. *Emerging Trends in Environmental Biotechnology* is an outstanding collection of current research that integrates basic and advanced concepts of biotechnology such as genomics, proteomics, bioinformatics, sequencing and imaging processes to improvise and protect the environment. This book is particularly attractive for scientists, researchers, students, educators and professionals in environmental science, agriculture, veterinary and biotechnology science. The book

will enable them to solve the problems about sustainable development with the help of current innovative biotechnologies such as recombinant DNA technology and genetic engineering which have tremendous potential for impacting global food security environmental health human and animal health and overall livelihood of mankind Features Presents easy to read chapters Information is presented in a very accessible and logical format Identifies and explores biotechnological approaches for environmental protection Encompasses biodegradation of hazardous contaminants biotechnology in waste management nanotechnology and issues in environmental biotechnology research
