

Chapter 09: Infertility Lowdermilk: Maternity & Women's Health Care, 12th Edition Questions and Correct Answers

1. Which test is performed around the time of ovulation to diagnose the basis of infertility?

- a. Hysterosalpingogram
- b. Vaginal ultrasonography
- c. Laparoscopy
- d. Follicle-stimulating hormone (FSH) level - Correct Answer: ANS: B

Ultrasonography is performed around the time of ovulation to assess pelvic structures for abnormalities, to verify follicular development, and to assess the thickness of the endometrium. A hysterosalpingogram is scheduled 2 to 5 days after menstruation to avoid flushing a potentially fertilized ovum out through a uterine tube into the peritoneal cavity. Laparoscopy is usually scheduled early in the menstrual cycle. Hormone analysis is performed to assess endocrine function of the hypothalamic-pituitary-ovarian axis when menstrual cycles are absent or irregular.

2. A man smokes two packs of cigarettes a day. He wants to know if smoking is contributing to the difficulty he and his wife are having getting pregnant. Which guidance should the nurse provide?

- a. "Your sperm count seems to be okay in the first semen analysis."
- b. "Only marijuana cigarettes affect sperm count."
- c. "Although smoking has no effect on sperm count, it can give you lung cancer."
- d. "Smoking can reduce the quality of your sperm." - Correct Answer: ANS: D

Cigarette smoking has detrimental effects on sperm and has been associated with abnormal sperm, a decreased number of sperm, and chromosomal damage. The nurse may suggest a smoking cessation program to increase the fertility of the male partner. Sperm counts vary from day to day and are dependent on emotional and physical status and sexual activity. Therefore, a single analysis may be inconclusive. A minimum of two analyses must be performed several weeks apart to assess male fertility. Marijuana use may depress the number and motility of sperm. Smoking is indeed a causative agent for lung cancer.

3. A couple comes in for an infertility workup, having attempted to achieve pregnancy for 2 years. The woman, 37 years of age, has always had irregular menstrual cycles but is otherwise healthy. The man has fathered two children from a previous marriage and had a vasectomy reversal 2 years ago. The man has
