**Computer Safety, Reliability and Security** Wolfgang Ehrenberger,1998-09-23 Computers and their interactions are becoming the characteristic features of our time Many people believe that the industrial age is going over into the information age In the same way as life of the beginning of this century was dominated by machines factories streets and railways the starting century will be characterised by computers and their networks This change naturally affects also the institutions and the installations our lives depend upon power plants including nuclear ones chemical plants mechanically working factories cars railways and medical equipment they all depend on computers and their connections In some cases it is not human life that may be endangered by computer failure but large investments e.g. if a whole plant interrupts its production for a long time In addition to loss of life and property one must not neglect public opinion which is very critical in many countries against major technical defects The related computer technology its hardware software and production process differ between standard applications and safety related ones In the safety case it is normally not only the manufacturers and the customers that are involved but a third party usually an assessor who is taking care of the public interest on behalf of a state authority Usually safety engineers are in a better position than their colleagues from the conventional side as they may spend more time and money on a particular task and use better equipment Automation, Production Systems, and Computer-integrated Manufacturing Mikell P. The Role of Computers in Handling Aerospace Systems Human Factors Task Data Irvin R. Whiteman, 1965 The characteristics of a computer based data system for handling human factors task information generated in support of advanced system development are described On the basis of information gathered from users and generators of data at representative Government and contractor installations the current and potential uses of computers were assessed to determine the desirable characteristics for a computerized human factors task data handling system The proposed data handling system will assist the human factors specialist and system design engineers in the design and development of systems by providing them with means for

- 1 drawing them closer to the data through a user oriented system
- 2 comparing data generated throughout the life cycle of an advanced system and across systems
- 3 analyzing data and conducting man machine simulations and
- 4 insuring that data are made available on a selective query and a timely basis

These objectives are met within the framework of a data system concept referred to as CENTRAL The functions of CENTRAL

are 1 data storage and retrieval 2 data processing 3 computer program maintenance and 4 system operational manual maintenance Author
