Kurt Anders Richardson, Kurt Antony Richardson, Wendy J. Gregory, Gerald Midgley, 2006 Exploring Supply Chain Management in the Creative Industries Gary Graham, 2005 SCM is a rapidly emerging paradigm that is transforming the organisation of business operations as firms seek ever new and innovative ways of finding the elusive mantra of competitive advantage Little work to date has been undertaken on the creative sector This e book hopes to address this by offering some interesting and informative exploratory work in different areas of the sector One aim was to offer some insights and lessons that could be drawn on by the wider business community **Modeling for Learning Organizations** John Douglas William Morecroft, 1994 In this book leading systems dynamics articulate the latest thinking and practices on how modeling can support learning in the management environment It includes discussions on teamwork a number of case studies and a review of current computer simulation software packages Modelling and Simulation 1991 European Simulation Multiconference, 1991 **The Farmer's Decision** Jerry L. Hatfield, 2005 Decision making to achieve a balance between the economic goals of producers and environmental quality benefits is complex Most of the time we consider that the balance is skewed to one side or the other and that there are winners and losers From the production perspective the loser is the economic return in exchange for environmental quality while from the environmental perspective the loser is the environment at the expense of agricultural production and increased inputs In reality there are opportunities within agriculture for a win win situation however to explore the endless possibilities that constitute acceptable solutions is extremely difficult Over the past few years there has been an increasing development of decision support tools that provide a framework that could be applied to agriculture As I have worked with producers extensively over the past few years it has become apparent that we could provide more information to the American producer that would help them evaluate different scenarios in their farming systems and evaluate potential alternatives through a combination of simulation tools and decision support systems These are easy concepts to suggest but more difficult to implement As an effort to expand our understanding of the potential of decision support tools for economic and environmental balance a proposal was made to the Organisation for Economic Co operation and Development OECD in two theme areas The outcome yielded an international workshop that assembled an international group of experts in decision support systems simulation models and agricultural production through industry consultants and producers This group also addressed enhancing environmental quality in agricultural systems Jerry L Hatfield from Preface Books in Print ,1991 *Group Model Building* Jac A. M. Vennix, 1996-08-16 This book is about increasing team performance It focuses on building system dynamics models when tackling a mix of interrelated strategic problems to enhance team learning foster consensus and create commitment The book is intended to be applied in the organizations of today As the command and control organization evolves into one of decision making teams so these teams have become the critical building blocks upon which the performance of the organization depends The team

members face an increased complexity of decision making with the interrelation of several strategic problems What this means is that people have different views of the situation and will define problems differently However research shows that this can in fact be very productive if and when people learn from each other in order to build a shared perspective Learning in this way might prove to be the only sustainable competitive advantage for organizations in the future As a result team leaders want to create learning teams and are confronted with issues such as how to create a situation where people doubt their ideas rather than stubbornly cling to dearly held views create a learning atmosphere rather than trying to win the discussion create a shared understanding of a problem in a team foster consensus and create commitment with a strategic decision facilitate Group Model Building Those who will benefit most from Group Model Building Facilitating Team Learning Using System Dynamics are those who are familiar with systems thinking or organizational learning or those who are working in groups and are coming up against the common difficulties **Australian Journal of Agricultural Research**,2006
