

The biological, social, and psychological characteristics analyzed on a genogram

A genogram outlines the characteristics of a family biologically, socially, and psychologically. These characteristics are passed down from generation to generation. A theory proposed by Dr. Murray Bowen suggests that a family is a system as an emotional unit that are affected by one family member's feelings, emotions, and decisions. (Bowen,)

The biological factors in a person are in their DNA and can not be altered. Certain genes can be passed to a person throughout the lifespan as they can be turned on and turned off. Biological factors include things like eye color, hair color, gastrointestinal diseases, arthritis, and obesity. Phenotypes are associated with biological traits as they are observable traits. Phenotypes make up the individual appearance and products of behavior.

Psychological traits are associated with mental illnesses and personality traits. Two personality traits are extrovert and introvert. An extrovert is someone who is outgoing in social situations and sometimes known as "the life of the party". On the other hand, an introvert is someone who is shy and keeps to themselves. These people tend to focus on their own feelings and thoughts and avoid being in social situations. Sometimes an introvert person will have an offspring that is extrovert because of how they were raised and the child sees that more or had to be shy and they think that they should be shy. However, sometimes the child branches out and creates their own behaviors. Depression and anxiety are two of the mental illnesses associated with psychological traits. A person with a general anxiety disorder has a hard time living in reality and worries the worst. They think a disaster is going to happen and are constantly overwhelmed about money, their health, and work or school. A college-age student has a higher
