Domagalski,2022-05-30 The old light cruiser Marblehead was living out her final years of naval service as a member of the
United States Asiatic Fleet in 1941 The small group of mostly antiquated ships based in the Philippines sailed the waters of
East Asia to show the American flag in places like China Hong Kong Japan and Singapore The sudden eruption of World War
II in the Pacific put the warship on the front lines of the conflict as Imperial Japan unleashed a series of devastating attacks
across the region On the morning of February 4 1942 the warship was surprised by Japanese planes northeast of Java Two
large bombs slammed into Marblehead causing fires casualties and knocking out her steering gear A third bomb exploded
close by underwater The near miss ripped a large gash into her hull allowing a torrent of water to rush inside the ship *Escape*
from Java takes the reader all throughout the ship as the story unfolds next to gunners toiling to keep their guns firing with
medical staff tending to the wounded and alongside damage control sailors working in flooded compartments The damage
was critical so much so the Japanese radioed they had sunk the ship In fact through courage sacrifice and super human effort
Marblehead would successfully make a harrowing 13 000 mile journey back to the US **Collier's** ,1943-04 **Black**

component based model to web application development that is similar to the model that has been used in standalone GUI applications for years. The technology builds on the experience gained from Java Servlets, JavaServer Pages and numerous commercial and open source web application frameworks that simplify the development process. In *JavaServer Faces*, developers learn how to use this new framework to build real world web applications. The book contains everything you will need: how to construct the HTML on the front end, how to create the user interface components that connect the front end to your business objects, how to write a back end that is JSF friendly and how to create the deployment descriptors that tie everything together. *JavaServer Faces* pays particular attention to simple tasks that are easily ignored but crucial to any real application: working with tabular data, for example, or enabling and disabling buttons. And this book doesn't hide from the trickier issues like creating custom components or creating renderers for different presentation layers. Whether you are experienced with JSF or just starting out, you will find everything you need to know about this technology in this book. Topics covered include: The JSF environment, Creating and rendering components, Validating input, Handling user generated events, Controlling page navigation, Working with tabular data, Internationalization, Integration between JSF and Struts, Developing custom renderers and custom components. *JavaServer Faces* is a complete guide to the crucial new JSF technology. If you develop web applications, JSF belongs in your toolkit and this book belongs in your library.

JavaServer Pages Hans Bergsten, 2001. *JavaServer Pages* is an easy way to create dynamic Web pages and simplify the task of building Web applications that work with a wide variety of Web servers, application servers, browsers and development tools. This book provides an overview of JSP concepts, discusses how JSP fits into the larger picture of Web applications and tells how to set up the JSP environment, generate dynamic content and handle errors.
