

- 2**
- a** There should be a clear statement of either the thickness or length of the straw (depending on the chosen question).
 - b** The force needed to bend the straw.
 - c** Look for at least two correct answers. They should be things that would actually affect the results if they were altered, for example: the length of the straw (if testing the thickness); the thickness of the straw (if testing the length); the position of the hook on the straw; the angle at which the force meter is pulled; the material from which the straw is made.
 - d** The description should state clearly what the learner would do, in a suitable sequence. A good measure of success is whether someone else could follow these instructions without having to ask for further guidance.
 - e** This is a low risk experiment. Care should be taken not to pull suddenly on the forcemeter/newton meter, which could become detached from the straw and suddenly fly upwards.
 - f** The results chart should be drawn with a ruler and a pencil. The first column (or row) should be headed with the variable that will be changed (either the thickness or length of the straw) with the appropriate unit. The second column (or row) should be headed Force needed to bend the straw in newtons. Some learners may decide to make repeat measurements, in which case they will need to include columns (or rows) for each of the force measurements, and another column (or row) for the calculated mean.
 - g** Accept any prediction that relates to the stated hypothesis. It does not have to be a 'correct' prediction. For example, for the first question, any of these predictions would be appropriate:
 - Thick bones are stronger than thin bones.
 - Thick bones are not stronger than thin bones.
 - Thin bones are stronger than thick bones.
 - There is no difference in the strength of thick bones and thin bones.

Unit 8 Chemical reactions

Topic 8.1 Exothermic reactions

Exercise 8.1A Investigating an exothermic reaction

- 1** the length of the magnesium ribbon
- 2** the change in temperature
- 3** the type of acid used; the volume of acid used; credit any other sensible control variables

4

Length of ribbon in cm	Start temperature in °C	End temperature in °C	Temperature change in °C
0.5	19.0	36.0	17.0
1.0	19.0	36.0	17.0
1.5	19.0	36.5	17.5

- 5** The results show that changing the length of magnesium used makes very little difference to the end temperature.
- 6** No. They have only used a very small range of lengths of magnesium.
- 7** 0.5 cm
