Simplifying Solution Space Hari Suman Naik,2017-04-26 Hari Suman Naik takes the perspective of modular systems and investigates how to enable non expert users to innovate and design by simplifying toolkit solution space New production technologies like digital fabrication and modular electronics along with appropriate toolkits can offer users a significant design flexibility to innovate solutions that meet their heterogeneous and sticky needs The author contributes towards understanding and designing toolkit solution space first using qualitative studies to explore mechanisms for simplifying the use and structure of toolkit solution space and then using a design study of an innovative toolkit The findings are relevant to innovation and product managers eager to incorporate user ideas with toolkits

Neural Implementations of Expertise Merim Bilalić, Robert Langner,Guillermo Campitelli,Luca Turella,Wolfgang Grodd,2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects
