

Extending Mendelian Genetics

The Chromosome Theory of Inheritance

- Arose out of Sutton and Boveri's observations of meiosis
- States that genes are located on chromosomes at a particular locus
- The physical separation of alleles during meiosis I is responsible for **Mendel's principle of segregation**
 - **Law of segregation**: one character (gene) with 2 traits (alleles). The pairs of alleles are separated during meiosis I in the formation of gametes.
 - The genes for different traits assort independently of one another at meiosis I because:
 - They are located on different non homologous chromosomes
 - They assort independently of one another
 - **Mendel's principle of independent assortment** - two characters, 4 traits

- Two kinds of genetic disorders:
 - Autosomal
 - Autosomal recessive
 - A recessive phenotype shows up in offspring only when both parents have that recessive allele
 - Ex. sickle-cell anemia (crescent-shaped hemoglobin), cystic fibrosis (defective chloride channel, causing damages to lungs, pancreas, etc.)
 - Autosomal dominant - one faulty allele causes a disorder
 - Homozygous or heterozygous individuals will display the trait
 - One heterozygous parent will pass it on to about half of his/her offspring
 - Any child with the trait must have a parent with the trait

Extending Mendelian Genetics Chapter Test B

Sabine Zange

Extending Mendelian Genetics Chapter Test B:

Immerse yourself in heartwarming tales of love and emotion with its touching creation, Experience Love's Journey in **Extending Mendelian Genetics Chapter Test B** .
