Energetics and Human Information Processing G.M. Hockey,Anthony W.K. Gaillard,Michael Coles,1986-09-30 The central theme of this book is the role of energetical factors in the regulation of human information processing activity This is a restatement of one of the classic problems of psychology that of accounting for motivational or intensive aspects of behaviour as opposed to structural or directional aspects The term

energetics was first used in the 1930 s by Freeman Duffy and others following Cannon s energy mobilization view of emotion and motivation The original concept had a limited life probably because of its unnecessary focus on relatively peripheral processes but it provided the foundations for the concepts of arousal and activation which became the popular motivational constructs of the 1950 s and 1960 s Now these too are found wanting The original assumptions of a unitary non specific process based on activation of the brain stem reticular formation have been shown to be misleading Current work in neurobiology has demonstrated evidence of discrete neurotransmitter systems having quite specific information processing functions and central roles in the regulation of behaviour Even the venerable curvilinear relationship between motivation and performance the Yerkes Dodson law has been shown to be at best an unhelpful oversimplification On a different front psychophysicists have found complex patterns in the response of different bodily systems to external stressors and to task demands

Concept Identification as a Function of Relevant and Irrelevant Information Donald George Wargo,1960
Handbook of Human Factors and Ergonomics Gavriel Salvendy,1997-05-12 In orchestrating this book Dr Salvendy invited contributions from more than 100 of the foremost authorities around the world Each of its 60 chapters was reviewed by an international advisory panel comprised of some of today s leading figures in human factors and ergonomics While each chapter establishes the theoretical and empirical foundations of the subject under discussion the book s approach is primarily applications oriented Hence throughout readers will find case studies examples figures and tables that optimize the usability of the material presented It is an indispensable tool for human factors and ergonomics specialists safety and industrial hygiene professionals and engineers human resource professionals and managers in manufacturing and service industries and for educational institutions and government
