Introduction To Cardiopulmonary Exercise Testing:

Introduction to Cardiopulmonary Exercise Testing Andrew M. Luks, Robb W. Glenny, H. Thomas Robertson, 2013-03-22
Cardiopulmonary exercise testing is an important diagnostic test in pulmonary medicine and cardiology. Capable of providing significantly more information about an individual's exercise capacity than standard exercise treadmill or 6 minute walk tests, the test is used for a variety of purposes including evaluating patients with unexplained exercise limitation or dyspnea on exertion, monitoring disease progression or response to treatment, determining fitness to undergo various surgical procedures, and monitoring the effects of training in highly fit athletes. Introduction to Cardiopulmonary Exercise Testing is a unique new text that is ideal for trainees. It is presented in a clear, concise, and easy-to-follow manner and is capable of being read in a much shorter time than the available texts on this topic. Chapters describe the basic physiologic responses observed during sustained exercise and explain how to perform and interpret these studies. The utility of the resource is further enhanced by several sections of actual patient cases which provide opportunities to begin developing test interpretation skills. Given the widespread use of cardiopulmonary exercise testing in clinical practice, trainees in pulmonary and critical care medicine, cardiology, sports medicine, exercise physiology, and occasionally internal medicine will find Introduction to Cardiopulmonary Exercise Testing to be an essential and one-of-a-kind reference.

ASEP's Exercise Medicine Text for Exercise Physiologists Tommy Boone, 2016-09-02
Watching TV, surfing the Internet, and sitting for long hours have replaced more active pursuits. Millions of Americans are simply not moving enough to meet the minimum threshold for good health and longevity. Exercise physiologists have researched and highlighted this fact for decades. That is why they emphasize the importance of regular exercise in the prevention of chronic diseases associated with physical inactivity and a sedentary lifestyle. Heart disease, obesity, type 2 diabetes, high blood pressure, stroke, peripheral arterial disease, depression, several types of cancers, and osteoporosis can be treated or even prevented with properly prescribed exercise. There is a need for integrating exercise physiology knowledge and rehabilitation programs as a continuous part of the healthcare profession. This opens up the opportunity for new approaches to manage patients suffering from chronic diseases and disabilities. *ASEP's Exercise Medicine Text for Exercise Physiologists* is designed to educate exercise physiologists about the significance of professionalism in exercise physiology, exercise medicine, and entrepreneurship opportunities. It combines scientific principles with cardiovascular calculation steps that support its use in the development of safe, well-rounded, and individualized exercise programs to help clients and patients sleep better, reduce stress, maintain a healthy body weight, keep bones strong, and joints healthy, decrease the risk for colon cancer, and improve mental function. This textbook demonstrates the importance of exercise medicine and will familiarize readers with ASEP guidelines. Exercise physiologists in training will therefore be prepared for contributing a meaningful role in the healthcare services sector.
