*Event History Analysis* Kazuo Yamaguchi, 1991 In a manner similar to many other titles within the Applied Social Research Methods Series this 182 page book thoroughly covers many of the specific methodological hurdles encountered in implementing event history analysis EHA The Applied Social Research Methods Series is the result of careful subject selection Consistent with the practical orientation of the book each of the application sections provides useful insights into data structure problems and programming notes Kazuo Yamaguchi's insightful review of problems in structuring EHA models is useful for those contemplating life course research We strongly recommend its inclusion in the libraries of marketing researchers and its inclusion on suggested reading lists of graduate research method seminars Journal of Marketing Research This book which is part of Sage Publications Applied Social Research Methods Series is a practical guide for those interested in using event history analysis The book's strength is that it is well written and easy to understand Even those with limited statistical backgrounds can follow the discussion and the systematic progression from the simpler to the more complex models although the author provides ample references for those wanting a more rigorous discussion Upon finishing the book I found myself wondering about specific accounting questions that might be addressed using event history analysis There are many and in fact most issues can be recast in an events framework In sum I recommend this book to anyone wanting to use event history analysis whether to apply to new research questions or to provide a fresh look at old questions The Accounting Review A significant introduction to the event history literature that provides the background to implement this difficult methodology successfully and that can be supplemented with other more advanced texts It will undoubtedly

become a prized text among students and a valuable reference for the research community Contemporary Sociology As a research tool event history analysis has recently become a key technique for researchers professionals and students in a wide range of disciplines However despite this increasing interest few resources exist which clearly examine this technique Now Event History Analysis provides a systematic introduction to models methods and applications of event history analysis Kazuo Yamaguchi emphasizes hands on information including the use and misuse of samples models and covariates in applications the structural arrangement of input data the specification of various models in such computer programs as SAS LOGIST and SPSS LOGLINEAR and the interpretation of parameters estimated from models This timely book also offers such significant topics as missing data hazard rate Cox s partial likelihood model survivor function and discrete time logit models for both one way and two way transitions Event History Analysis is essential for researchers professionals and students of public health sociology labor economics political science and organization studies

**Demographic Applications of Event History Analysis** James Trussell,1992 Event history analysis the study of individual life histories has developed rapidly over the past few years This book illustrates the use of the new techniques at the frontier of the subject The number of surveys undertaken throughout the world to collect detailed information on the timing of events in individual lives eg fertility surveys migration histories have increased and new methods to analyse such data have developed Unresolved technical and practical issues remain and researchers have limited experience of the new techniques this volume addresses these issues and provides information on the new methodologies The book covers three main areas First it summarizes the work on the incorporation of unmeasured heterogeneity into the analysis of event histories secondly it introduces a series of competitions in which pairs of teams are assigned to analyse the same topic using the same data finally it discusses other methodological issues such as the treatment of missing data the analysis of current status data and the relation between discrete and continuous time models
