organizations operate in an increasingly competitive market. Regulatory environments, customer and supplier data, and internal operational information all impact how data is viewed and interpreted. With a capable and efficient business intelligence (BI) solution, all levels of an organization can receive information, how, when, and where they need it to make faster and better aligned decisions. Every user can have access to all the capabilities of the BI solution, and often organizations can determine a user's business need to access information using typical characteristics that are defined by that user's role. Many organizations often satisfy this complexity and these diverse demands with a number of point solutions. With IBM Cognos Business Intelligence (BI), you can satisfy needs throughout the user community and ensure that everyone can work and collaborate from a consistent set of data. In addition, IT is simplified with fewer components to deploy, manage, and maintain. Organizations need to make the most of a workforce that is increasingly driven to multi-task, network, and collaborate. IBM Cognos BI delivers analytics that everyone in the organization can use to answer key business questions.

This IBM Redguide™ publication highlights features of IBM Cognos BI version 10.1: *Co-locating Transactional and Data Warehouse Workloads on System z*. Mike Ebberts, Dino Tonelli, Jason Arnold, Patric Becker, Yuan-Chi Chang, Willie Favero, Shantanu Kethireddy, Nin Lei, Shirley Lin, Ron Lounsbury, Susan Widing Lynch, Cristian Molaro, Deepak Rangarao, Michael Schapira, IBM Redbooks, 2010-12-03.

As business cycles speed up, many customers gain significant competitive advantage from quicker and more accurate business decision making by using real data. For many customers, choosing the path to co-locate their transactional and analytical workloads on System z better leverages their existing investment in hardware, software, and skills. We created a project to address a number of best practice questions on how to manage these newer analytical type workloads, especially when co-located with traditional transactional workloads. The goal of this IBM Redbooks publication is to provide technical guidance and performance trade-offs associated with resource management and potentially DB2 data sharing in a variety of mixed transactional data warehouse System z topologies. The term co-location used here and in the rest of the book is specifically defined as the practice of housing both transactional OLTP and data warehouse analytical workloads within the same System z configuration. We also assumed that key portions of the transactional and data warehouse databases would reside on DB2 for z/OS. The databases may or may not reside in a DB2 data sharing environment; we discuss those pros and cons in this book. The intended audience includes DB2 data warehouse architects and practitioners who are facing choices in resource management and system topologies in the data warehouse arena. This specifically includes Business Intelligence (BI) administrators, DB2 database administrators (DBAs), and z/OS performance administrators, systems programmers. In addition, decision makers and architects can utilize this book to assist in making platform and database topology decisions. The book is divided into four parts. Part I, "Introducing the Co-location Project," covers the System z value proposition and why one should consider System z as the central platform for their data warehousing business analytics needs. Some topics are risk avoidance via data consolidation, continuous availability, simplified

disaster recovery IBM Smart Analytics Optimizer reduced network bandwidth requirements and the unique virtualization and resource management capabilities of System z LPAR z VM and WLM Part I also provides some of the common System z co location topologies along with an explanation of the general pros and cons of each This would be useful input for an architect to understand where a customer is today and where they might consider moving to Part II Project environment covers the environment products workloads workload drivers and data models implemented for this study The environment consisted of a logically partitioned z10TM 32way running z VM Linux and z OS operating system instances On those instances we ran products such as z OS DB2 V9 IBM Cognos Business Intelligence Version 8 4 for Linux on System z InfoSphere™ Warehouse for System z InfoSphere Change Data Capture z OS WebSphere V7 Tivoli Omegamon for DB2 Performance expert Utilizing these products we created transactional OLTP data warehouse query and data warehouse refresh workloads All the workloads were based on an existing web based transactional Bookstore workload that s currently utilized for internal testing within the System p and z labs While some IBM Cognos BI and ISWz product usage and experiences information is covered in this book we do not go into the depth typically found in IBM Redbooks publications since there s another book focused specifically on that [Big Data Analytics with IBM Cognos Dynamic Cubes](#) David Cushing, MaryAlice Campbell, Avery Hagleitner, IBM Redbooks, 2015-11-27 With IBM Cognos Business Intelligence you have a proven enterprise business intelligence BI platform with an open data access strategy Because Cognos Business Intelligence uses a business language that is relevant to consumers you can pull data from various data sources Then you can package it into a business model and make it available to consumers in various interfaces that are suited to the task IBM Cognos Dynamic Cubes which is a feature of the Cognos Business Intelligence V10 2 2 software complements the existing query engine As explained in this IBM Redbooks Solution Guide it extends Cognos scalability to enable speed of thought analytics over terabytes of enterprise data without being forced to rely on a new data warehousing appliance With this capability which adds a new level of query intelligence you can unleash the power of your large enterprise data warehouse **Tivoli Integration Scenarios** Redbooks Tivoli Integration Scenarios Team IBM, Andre Ricardo Cavalcanti de Araujo, Antonio Orlando Neto, Ayron Dal Pont, Bill J Layne, Bruno Caiado Paranhos Carneiro, Bruno Nogueira Costa, Carlos Alexandre Salgado Penante, Carlos Felipe Franca da Fonseca, Carolina Escribano Sanchez, Datta S Khot, David Kwock, David Stephenson, Diogo Tadeu Silva de Araujo, Douglas Barranqueiros Gomes, Eravimangalath P Naveen, Krishnan Venkitasubramanian, Leucir Marin Junior, Harshini Mariswamy, Johan Raeymaeckers, Marcel Dubiella Ferreira de Oliveira, Marcel Laurenz, Marianne Hardh, Mario Schuerewegen, Miguel Sanders, Murat Kipel, Rishikesh Kumar, Neetha Mangalore, Ozgun Odabasi, Pankaj Pandey, Rafael Risso Moleiro, Sabri Kizanlik, Sandy Cash, Soumyadeep Paul, Tomasz Sekman, Vasfi Gucer, Yatresh K Agarwal, IBM Redbooks, 2011-01-11 This IBM Redbooks publication provides a broad view of how Tivoli system management products work together in several common scenarios You must achieve seamless integration for operations personnel to work with the
