**Technologies in Biomedical and Life Sciences Education** Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to traditional face to face learning. Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard, the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further, they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events, the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently, the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come. [What Big Data Can Tell Us](#)

Pathologic Findings in Stranded Marine Mammals: A Global Perspective Gregory Dana Bossart,Alvin Cyril Camus,Debra Lee Miller,Stephen Raverty,2022-02-09 This project is posthumously dedicated to Dr Gregory Dana Bossart Whether you knew him as colleague mentor friend family member or simply knew of him you could not help but be awestruck by his dedication intelligence thoughtfulness work ethic and passion for scientific inquiry especially for conservation of the marine environment Many of his publications were seminal in marine mammal health including infectious environmental and zoonotic diseases As we collected manuscripts for this special Frontiers edition it was heartwarming to hear the comments from contributors So many research scientists field biologists and veterinarians could easily have given up and said I just can t do this now especially with the added challenges posed by the current COVID 19 pandemic Instead contributors from around the world were determined to contribute to this collection because of their inspiration and shared commitment with Greg s vision The love

and admiration within the marine community for Greg is phenomenal. With that said, we would be remiss if we did not say a few words about Greg as a mentor and friend. Greg had a knack for helping students realize their abilities and pursue their own independent contributions to the marine mammal community. He shared in their successes and worked tirelessly to facilitate their aspirations. Greg would involve students early in their careers, introduce them to collaborators, and promote their work. Greg was a genuinely caring person. When he asked you how you were doing, he honestly wanted to know. He was always there, ready to listen and provide guidance. If you were to ask Greg what was most important to him in life, he would say God, family, and marine life, and one could argue that he had a special fondness for manatees. He believed in the beauty of nature and that God had a hand in all of it. He was in pursuit of ensuring that we all share this earth responsibly and sustainably. We miss Greg dearly but honor and celebrate him as we carry on in our pursuits.

**Dual Role of Microglia in Health and Disease: Pushing the Balance Towards Repair** Raquel Ferreira, Liliana Bernardino, 2015-07-23

Microglial cells play a vital role in the innate immune response occurring in the Central Nervous System (CNS). Under physiologic conditions, microglia dynamically patrol the brain parenchyma and participate in the remodeling of active neuronal circuits. Accordingly, microglia can boost synaptic plasticity by removing apoptotic cells and by phagocytizing axon terminals and dendritic spines that form inappropriate neural connections. Upon brain and spinal cord injury or infection, microglia act as the first line of immune defense by promoting the clearance of damaged cells or infectious agents and by releasing neurotrophins and/or proneurogenic factors that support neuronal survival and regeneration. Recently, two main pathways were suggested for microglia activation upon stimuli. Classical activation is induced by Toll-like receptor agonists and Th1 cytokines and polarizes cells to an M1 state, mainly leading to the release of TNF- $\alpha$ , IL-6, and nitric oxide, and to grave neural damage. Alternative activation is mediated by Th2 cytokines and polarizes cells to an M2a state, inducing the release of anti-inflammatory factors. These findings have further fueled the discussion on whether microglia has a detrimental or beneficial action. M1 or M2-associated phenotypes, respectively, in the diseased or injured CNS, and more importantly, on whether we can shift the balance to a positive outcome. Although microglia and macrophages share several common features upon M1 and M2 polarizing conditions, they are believed to develop distinct phenotypic and functional properties which translate into different patterns of activity. Moreover, microglia/macrophages seem to have developed a tightly organized system of maintenance of CNS homeostasis since cells found in different structures have different morphology and specific function, e.g., meningeal macrophages, perivascular macrophages, choroid plexus macrophages. Nevertheless, though substantial work has been devoted to microglia function, consensus around their exact origin, their role during development, as well as the exact nature of their interaction with other cells of the CNS, has not been met. This issue discusses how microglial cells sustain neuronal activity and plasticity in the healthy CNS, as well as the cellular and molecular mechanisms developed by microglia in response to injury and disease. Understanding the mechanisms involved in microglia

actions will enforce the development of new strategies to promote an efficient CNS repair by committing microglia towards neuronal survival and regeneration
