| Write the code to call the function named <code>send_signal</code> . There are no parameters for this function.                                                                                            | <code>send_signal()</code>                           |
| Assume that <code>print_todays_date</code> is a function that uses no parameters and returns no value. Write a statement that calls (invokes) this function.                                               | <code>print_todays_date()</code>                     |
| Write a definition of the function <code>printDottedLine</code> , which has no parameters and doesn't return anything. The function prints to standard output a single line consisting of 5 periods ("."). | <pre>def printDottedLine():     print(".....")</pre> |
| Assume that <code>print_error_description</code> is a function that expects one int parameter and returns no value.                                                                                        | <code>print_error_description(14)</code>             |
| Write a statement that invokes the function <code>print_error_description</code> , passing it the value 14.                                                                                                |                                                      |
| Write the code to call a function whose name is <code>send_number</code> . There is one argument for this function, which is an int. Send 5 as an argument to the function.                                | <code>send_number(5)</code>                          |
| Write the code to call a function named <code>send_variable</code> and that expects a single int parameter.                                                                                                | <code>send_variable(x)</code>                        |
| Suppose a variable called <code>x</code> refers to an int. Pass this variable as an argument to <code>send_variable</code> .                                                                               |                                                      |
| Write the code to call a function named <code>send_two</code> and that expects two parameters: a float and an int. Invoke this function with 15.555 and 133 as arguments.                                  | <code>send_two(15.555, 133)</code>                   |
| Write the code to call a function named <code>send_object</code> and that expects one parameter, of type <code>Customer</code> .                                                                           | <code>send_object(John_Doc)</code>                   |
| Suppose there is an object of type <code>Customer</code> , referred to by <code>John_Doc</code> . Use this object as an argument to the function.                                                          |                                                      |
