**Design by Inelastic Analysis** Mark D. Denavit, Ali Nassiri, Mustafa Mahamid, Martin Vild, Halil Sezen, Frantisek Wald, IDEA StatiCa, 2024-10-29 Comprehensive resource on the finite element method in structural steel connection design through verification with AISC 360 provisions Steel Connection Design by Inelastic Analysis covers the use of the finite element method in structural steel connection design Verification with AISC 360 provisions is presented focusing on the Component Based Finite Element Method CBFEM a novel approach that provides the global behavior and verification of resistance for the design of structural steel connections This method is essential for fast and practical design and evaluation of connections with different levels of geometry and complexity Detailed modeling and verification examples with references to AISC and other relevant publications are included throughout the text along with roughly 250 illustrations to aid in reader comprehension Readers of this text will benefit from understanding at least the basics of structural design ideally through civil structural or mechanical engineering programs of study Written by a team of six highly qualified authors Steel Connection Design by Inelastic Analysis includes information on T stub connections single plate shear connections bracket plate connections beam over column connections and end plate moment connections Bolted wide flange splice connections temporary splice connections and chevron brace connection in a braced frame Brace connections at beam column connection in a braced frame and double angle simple beam to column connections Semi rigid beam to column connections covering code design calculations and comparisons IDEA StatiCa analysis and ABAQUS analysis Steel Connection Design by Inelastic Analysis is an authoritative reference on the subject for structural engineers Engineers of Record EORs fabrications specialists and connection designers involved in the structural design of steel connections in the United States or any territory using AISC 360 as the primary design code *Finite Element Analysis on Microcomputers* Nicholas Baran, 1988

On the Use of Nonlinear Finite Element Analysis Techniques to Model Structural Steel Angle Response Christopher James Earls, 1995 Nuclear Power Plant Safety and Mechanical Integrity George Antaki, Ramiz Gilada, 2014-11-25 One of the most critical requirements for safe and reliable nuclear power plant operations is the availability of competent maintenance personnel However just as the nuclear power industry is experiencing a renaissance it is also experiencing an exodus of seasoned maintenance professionals due to retirement The perfect guide for engineers just entering the field or

experienced maintenance supervisors who need to keep abreast of the latest industry best practices Nuclear Power Plant Maintenance Mechanical Systems Equipment and Safety covers the most common issues faced in day to day operations and provides practical technically proven solutions The book also explains how to navigate the various maintenance codes standards and regulations for the nuclear power industry Discusses 50 common issues faced by engineers in the nuclear power plant field Provides advice for complying with international codes and standards including ASME Describes safety classification for systems and components Includes case studies to clearly explain the lessons learned over decades in the nuclear power industry

*Non-linear Finite Element Analysis of Extended Shear Tab Connections* Mohamed Fawzi Suleiman,2013 The Manual of Steel Construction AISC 14th edition refers to an extended shear tab as a single plate shear connection This method of providing simple connections has become quite popular with both fabricators and erectors Extended shear tab connections were formally introduced in the 13th edition of AISC Steel Construction Manual Using experimental data from extended shear tab connections Sherman and Ghorbanpoor introduced a design methodology in 2002 for extended shear connections Twisting of the shear tab controlled the capacity of the specimens tested by Sherman and Ghorbanpoor which were not laterally braced In the latest edition of AISC Steel Manual design equations are provided to assess the need for stabilizer plates in the connection region of extended shear tabs In an effort to understand whether twisting of the shear tab can be a controlling design limit state three dimensional nonlinear finite element analyses in conjunction with design case studies

were conducted The analyses included 364 connections with different configurations were studied with an a distance of 9 11 and 16 inches The finite element models were comprehensive in terms of simulating nonlinear material properties boundary conditions pretensioning in the bolts geometric nonlinearity etc It was possible to accurately replicate the responses shear force connection vertical deflection and shear force connection angle of twist measured in a number of previous tests and to fairly well predict the observed failure modes Using a 3D nonlinear finite element analysis technique the response of 16 selected connections which had been designed to meet all the applicable limit states in AISC Steel Manual were evaluated The presence of floor slab which braces the top flange of the beam was simulated in the analyses For a number of cases the connection behavior at the ultimate limit state was dominated by twisting i e the relationship between torsional moment and angle twist indicated a noticeable level of loss of stiffness in comparison to that from the shear vertical displacement relationship However the level of lateral displacement of the shear tab was small particularly for unfactored loads when control of deformations is an important design objective According to AISC provisions Eq 10 6 stabilizer plates would not be required for any of these 16 connections which were evaluated by 3D nonlinear FEA Therefore current AISC provisions are a good predictor of the expected level of out of plane displacement of the shear tab due to twisting It should be noted that large lateral displacements occurred at the ultimate state when the connection ductility is the main design consideration but not the magnitudes of deformations and distortions Therefore this equation can be used to determine whether stabilizer plates are needed or not however it does not predict whether the response at the ultimate limit state will be dominated by excessive loss of torsional stiffness of the shear tab Instead of using stabilizer plates a thicker plate can be used for the shear tab This solution is considered to be more economical and easier than welding stabilizer plates in the connection region
