professionals researchers and graduate level students *Government Cloud Procurement* Kevin McGillivray,2021-12-16 In *Government Cloud Procurement* Kevin McGillivray explores the question of whether governments can adopt cloud computing services and still meet their legal requirements and other obligations to citizens The book focuses on the interplay between the technical properties of cloud computing services and the complex legal requirements applicable to cloud adoption and use The legal issues evaluated include data privacy law GDPR and the US regime jurisdictional issues contracts and transnational private law approaches to addressing legal requirements McGillivray also addresses the unique position of governments when they outsource core aspects of their information and communications technology to cloud service providers His analysis is supported by extensive research examining actual cloud contracts obtained through Freedom of Information Act requests With the demand for cloud computing on the rise this study fills a gap in legal literature and offers guidance to organizations considering cloud computing Big Data, Databases and "Ownership" Rights in the Cloud Marcelo Corrales Compagnucci,2019-11-02 Two of the most important developments of this new century are the emergence of cloud computing and big data However the uncertainties surrounding the failure of cloud service providers to clearly assert ownership rights over data and databases during cloud computing transactions and big data services have been perceived as imposing legal risks and transaction costs This lack of clear ownership rights is also seen as slowing down the capacity of the Internet market to thrive Click through agreements drafted on a take it or leave it basis govern the current state of the art and they do not allow much room for negotiation The novel contribution of this book proffers a new contractual model advocating the extension of the negotiation capabilities of cloud customers thus enabling an automated and machine readable framework orchestrated by a cloud broker Cloud computing and big data are constantly evolving and transforming into new paradigms where cloud brokers are predicted to play a vital role as innovation intermediaries adding extra value to the entire life cycle This evolution will alleviate the legal uncertainties in society by means of embedding legal requirements in the user interface and related computer systems or its code This book situates the theories of law and economics and behavioral law and economics in the context of cloud computing and takes database rights and ownership rights of data as prime examples to represent the problem of collecting outsourcing and sharing data and databases on a global scale It does this by highlighting the legal constraints concerning ownership rights of data and databases and proposes finding a solution outside the boundaries and limitations of the law By allowing cloud brokers to establish themselves in the market as entities coordinating and actively engaging in the negotiation of service level agreements SLAs individual customers as well as small and medium sized enterprises could efficiently and effortlessly choose a cloud provider that best suits their needs This approach which the author calls plan like architectures endeavors to create a more trustworthy cloud computing environment and to yield radical new results for the development of the cloud computing and big data markets *Controls & Assurance in the Cloud: Using COBIT 5* ISACA,2014-03-24 This practical guidance was
