Natural Language Processing and Information Systems Zoubida Kedad, Nadira Lammari, Elisabeth Métais, Farid Meziane, Yacine Rezgui, 2007-08-15 This book constitutes the refereed proceedings of the 12th International Conference on Applications of Natural Language to Information Systems NLDB 2007 held in Paris France in June 2007 It covers natural language for database query processing email management semantic annotation text clustering ontology engineering natural language for information system design information retrieval systems and natural language processing techniques **Text Analysis Pipelines** Henning Wachsmuth, 2015-12-02 This monograph proposes a comprehensive and fully automatic approach to designing text analysis pipelines for arbitrary information needs that are optimal in terms of run time efficiency and that robustly mine relevant information from text of any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines **Mining Complex Data** Zbigniew W. Ras, 2008-05-26 This book constitutes the refereed proceedings of the Third International Workshop on Mining Complex Data MCD 2007 held in Warsaw Poland in September 2007 co located with ECML and PKDD 2007 The 20 revised full papers presented were carefully reviewed and selected they present original results on knowledge discovery from complex data In contrast to the typical tabular data complex data can consist of heterogenous data types can come from different sources or live in high dimensional spaces All these specificities call for new data mining strategies Formal Methods and Software Engineering Jin Song Dong, Huibiao Zhu, 2010-11-09 This book constitutes the refereed proceedings of the 12th International Conference on Formal Engineering Methods ICFEM 2010 held in Shanghai China November 2010 The 42 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 114 submissions The papers address all current issues in formal methods and their applications in software engineering They are organized in topical sections on theorem proving and decision procedures web services and workflow verification applications of formal methods probability and concurrency program analysis model checking object orientation and model driven engineering as well as specification and verification **Web, Artificial Intelligence and Network Applications** Leonard Barolli, Makoto

Incremental Construction of Code Property Graphs Samuel Hopstock, 2021-11-17 Master s Thesis from the year 2021 in the subject Computer Science IT Security grade 2 0 Technical University of Munich Department of Informatics language English abstract This thesis extends a modified CPG approach that is able to operate on multiple programming languages i e C C Java Python and Golang available on GitHub3 Fra21a Graph based code analysis systems are versatile tools for reasoning about the correctness of complex software projects One area in which they are widely used is in source code auditing Security vulnerabilities for example using cryptographic functions with insecure algorithms can be introduced by coding patterns that spread over the boundaries of several methods classes or even files in the project This is where graph based analysis makes finding these vulnerabilities easier by creating a framework where the source code can be represented as a graph and vulnerable **Windows Magazine** ,1997 **Data Structures and Algorithm Analysis in Java** Mark Allen Weiss, 2007 As the speed and power of computers increases so does the need for effective programming and algorithm analysis By approaching these skills in tandem Mark Allen Weiss teaches readers to develop well constructed maximally

efficient programs in Java A full language update to Java 5 0 throughout the text particularly its use of generics adds immeasurable value to this advanced study of data structures and algorithms This Second Edition features integrated coverage of the Java Collections Library as well as a complete revision of lists stacks queues and trees Weiss clearly explains topics from binary heaps to sorting to NP completeness and dedicates a full chapter to amortized analysis and advanced data structures and their implementation Figures and examples illustrating successive stages of algorithms contribute to Weiss careful rigorous and in depth analysis of each type of algorithm A logical organization of topics and full access to source code compliment the text s coverage
