Linear & Circular interpolations for a workpiece* Roland Nathan Kalonji,2018-03-20 Research Paper postgraduate from the year 2017 in the subject Engineering Mechanical Engineering University of the Witwatersrand language English abstract A combined 3D linear and circular interpolation principle is developed on the basis of the 3D linear and circular interpolation principles The task was to choose and design a creative item to be machined using CNC machining which then required to write a code using CNC language Prior to the machining process we did a Computer Aided Design CAD drawing of the workpiece The drawing was further modified with the final model drawn using Auto Desk Inventor We used foam for our model and a 31 diameter end mill tool The main problem that was experienced was the cutting time the model took longer to be complete The cutting time was affected by the complexity of the design chosen tool size and the cutting technique Besides we learnt from the demonstration that the shorter the constructed code the more robust it is using a bigger tool is more efficient in terms of saving energy and time and that if the code is correct the CNC machine model becomes identical to that
