

NY Regents Living Environment Diffusion Lab Questions

1. Base your answer to the question on the information and diagram below and on your knowledge of biology.

A student added equal volumes of water to two different beakers. He then added blue food dye to one and yellow to the other. Next, he placed a white paper towel across the two beakers so that it went down into the liquid and connected the two beakers.

After 20 minutes, the section of paper towel connecting the two beakers had turned color. The towel most likely turned green as a result of the

- A) separation of the dye molecules through the process of chemotaxis
- B) dye moving across the towel due to the process of electrophoresis
- C) diffusion of the blue- and yellow-dyed water across the towel
- D) active transport of the blue and yellow food dyes

Base your answer to questions 2 and 3 on the information below and on your knowledge of biology.

The diagram below represents a lab setup. The artificial cell (dialysis tube) contains a starch solution and the beaker contains a solution of starch indicator and water. The setup is left undisturbed for twenty minutes.

- 2. Describe one observation that could be made that would confirm that the molecule you identified in the last question had passed through the membrane.
 - 3. Identify one molecule, present in this setup, that will be able to pass through the dialysis tubing.
