## USER GUIDE

# LabVIEW™ 2009 VI Analyzer Toolkit

The LabVIEW 2009 VI Analyzer Toolkit allows you to interactively and programmatically test VIs to find areas for improvement. The toolkit contains 78 tests that address a wide range of performance and style issues.

The toolkit organizes the tests into the following main categories:

- **Block Diagram**—Checks block diagram performance and style issues, such as wiring, loop and structure usage, coercion dots, and unnecessary elements on the block diagram.
- **Complexity Metrics**—Checks for VI complexity, such as nesting, code reuse, and modularity.
- **Documentation**—Checks for documentation within a VI for developers and users, such as VI and control descriptions and block diagram comments, and checks the spelling on VIs, front panels, and block diagrams.
- **Front Panel**—Checks front panel design and user interface issues, such as control usage, font selection, and labels.
- **General**—Checks performance and style issues that do not fit into the other categories, such as file properties, icons and connector pane, and VI properties.
- **VI Metrics**—Checks block diagram and front panel metrics, such as the number of connector pane inputs and outputs, controls and indicators, and nodes.

This user guide provides a step-by-step introduction to the process of creating, configuring, and running a single VI Analyzer task and using the VI Analyzer to interpret the results. The user guide also shows you how to export test results, save task configuration settings so you can run and re-run tasks quickly, and create tools for analyzing VIs programmatically.
