 - Processing of data into information, generates 'actionable' knowledge
- Data Management : discipline that focuses on the proper generation, storage and retrieval of data (addition, deletion, modification, listing)

 - Database : shared, integrated computer structure that houses a collection of related data
 - Contains :
 - End user data : raw facts
 - Metadata : data about the data characteristics and relationships
 - Provides a description of data characteristics and relationships in data
 - Compliments and expands value of data
- Database management system : collection of programs that manage the database structure and controls access to the data stored in the database
 - 'Very well organized electronic filing cabinet', where the powerful software (DBMS) helps manage the cabinet's contents
 - Advantages :
 - Makes data management more efficient and effective
 - Promotes integrated view of organization's operations
 - Probability of data inconsistency is greatly reduced

 - Better data integration - wider access, integrated view of organization's operations
 - Minimized data inconsistency - data inconsistency is where different versions of the same data yield inconsistent results.
 - Improved data access - quick access to ad hoc queries
 - Improved decision making - improved access
 - Increased end-user productivity - through the availability of data, information is usable, enables user to make quick, informed decisions

- Data Quality and governance :
 - Data quality : comprehensive approach to ensuring the accuracy, validity, and timeliness of data
 - Uniqueness : is the data unique and there is no redundancy in the database
 - Unambiguous : is the meaning of the data clear
 - Data governance : describes a strategy or methodology defined by an organisation to safeguard data quality
 - Organization's produce their own series of policies and procedures for managing availability, usability, quality, integrity and security of data within an organisation
