	External Ear The external ear consists of the auricle (pinna) and the ear canal. The auricle is made of cartilage and is responsible for collecting sound waves. The ear canal leads to the eardrum (tympanic membrane).	Middle Ear The middle ear is located behind the eardrum and contains three ossicles: the malleus, incus, and stapes. These bones are responsible for transmitting sound vibrations from the eardrum to the inner ear.	Internal Ear The internal ear is located deep within the skull and contains the cochlea and vestibular system. The cochlea is responsible for converting sound vibrations into electrical signals that the brain can interpret. The vestibular system is responsible for maintaining balance and spatial orientation.	Common ENT Disorders Otitis media (middle ear infection), sinusitis (inflammation of the sinuses), allergic rhinitis (hay fever), and hearing loss are common ENT disorders.	ENT Examination The ENT examination involves a physical exam of the head and neck, including the ears, nose, and throat. The examiner may use a otoscope to examine the ear canal and eardrum, and a laryngoscope to examine the larynx and pharynx. The patient should be asked about any recent infections, allergies, or changes in hearing or vision.	ENT Physical Exam The ENT physical exam includes a visual inspection of the face and neck, palpation of the lymph nodes, and auscultation of the lungs and heart. The examiner should also perform a detailed examination of the ears, nose, and throat.	ENT Differential Diagnosis The differential diagnosis for ENT disorders includes infections, allergies, autoimmune diseases, and structural abnormalities. The examiner should consider the patient's symptoms and physical exam findings when making a diagnosis.	ENT Management The management of ENT disorders depends on the specific condition. Treatment may include antibiotics, decongestants, antihistamines, and surgery. The patient should be educated about the condition and the importance of follow-up care.	
	Nasal Cavity The nasal cavity is the space inside the nose. It is lined with mucous membranes and contains the olfactory epithelium, which is responsible for the sense of smell. The nasal cavity is divided into two halves by the nasal septum.	Sinuses The sinuses are air-filled cavities in the skull that drain into the nasal cavity. There are four pairs of sinuses: the maxillary, ethmoid, sphenoid, and frontal sinuses. Sinusitis is an inflammation of the sinuses.
