Since the publication of the last edition this process has been adapted to a wider range of applications notably for high temperature and temperature sensitive products. Equipment has been greatly improved achieving faster color change increasing transfer efficiency and reducing overall powder usage. Environmental requirements have prompted many companies to switch to powder coating. *Users Guide to Powder Coating Fourth Edition* combines information on the latest breakthroughs in the industry notable ultraviolet curable materials for plastic and wood products and improved systems and tried and true guidelines from the previous edition including factors like material selection design considerations surface preparation quality control and testing trouble shooting and safety and more so you can achieve superior finishes with efficiency. **Powder Coating** Jeffery Zurschmeide, 2015 Most metals including steel cast iron and aluminum can be powder coated. Powder coating specialist and seasoned author Jeffrey Zurschmeide explains the process principles and options so you can powder coat all your favorite parts and components. More durable than paint many car owners choose to powder coat the frame suspension and other parts to withstand extreme conditions and the elements. Zurschmeide profiles all of the equipment supplies and popular kits required for powder coating parts. He explains how to set up and ventilate your workshop for powder coating. He then shows you how to properly clean the part which includes chemical strippers wire brushes media blasting and sanding media spray with a media gun and then cure with heat. He compares and contrasts several popular kits and explains how they function and perform. A wide range of powders and powder coating chemicals are available and he explains the attributes of each as well as what to expect for results.
