Handbook of Carbon Offset Programs Anja Kollmuss, Michael Lazarus, Carrie Lee, Maurice LeFranc, Clifford Polycarp, 2010-08-12 Greenhouse gas GHG offsets have long been promoted as an important element of a comprehensive climate policy approach Offset programs can reduce the overall cost of achieving a given emission goal by enabling emission reductions to occur where costs are lower Offsets have the potential to deliver sustainability co benefits through technology development and transfer They can also develop human and institutional capacity for reducing emissions in sectors and locations not included in a cap and trade or a mandatory

government policy However offsets can pose a risk to the environmental integrity of climate actions especially if issues surrounding additionality permanence leakage quantification and verification are not adequately addressed The challenge is to design offset programs and policies that can maximize their potential benefits while minimizing their potential risks This handbook provides a systematic and comprehensive review of existing offset programs It looks at what offsets are how offset mechanisms function and the successes and pitfalls they have encountered Coverage includes offset programs across the full swath of applications including mandatory and voluntary systems government regulated and private markets carbon offset funds and accounting and reporting protocols such as the WBCSD WRI GHG Protocol and ISO 14064 Learning from the successes and failures of these programs will be essential to crafting effective climate policy This is an essential reference for all regulators policy makers business leaders and NGOs concerned with the design and operation of GHG offset programs world wide Published with SEI

Hidenori Niizawa, Tōru Morotomi, 2014 Based on results of the first phase of the Kyoto Protocol which requires participating industrial countries to limit their carbon emissions this book recommends creating a global regulatory regime that would set emission targets for all nations The authors argue that once these targets and the policies for meeting them are established countries will be spurred to develop lower carbon producing economies The book discusses experiences in Japan primarily along with results from collaborative research between Japan and the Republic of Korea and comparative studies between Japan and Germany The chapters adopt different perspectives looking at the issue from the discipline of economics as well as a more sociological neo institutionalist viewpoint Publisher s description
