*Decision-Making in Engineering Design* Yotaro Hatamura,2006-06-01 This book is a sequel to The Practice of Machine Design and The Practice of Machine Design Book 3 Learning from Failure It deals with what happens inside the human mind during such activities as design and production and how we reach decisions Unlike other regular machine design textbooks or handbooks that describe how to accomplish good designs the present volume explains what the designer thinks when making design decisions A design starts with a vague concept and gradually takes shapes as it proceeds and during this process the mind extracts elements and makes selections and decisions the results expressed in sketches drawings or sentences This book aims at exposing the reader to the processes of element extraction selection and decision making through real life examples Such a book has never been published before An explicit description of the processes of making decisions on the contrary has been greatly needed by designers and the managers of design groups have been much aware of such a lack The non existence of this type of book in the past is due to the following three reasons the benefit of describing the mind process of design was never made clear the method of such clarification was unknown and no one ever invested the vast energy for producing such a manifestation Under these circumstances we the members of the Practice of Machine Design Research Group boldly tackled the problem of expressing the decision processes in design and have documented our findings in this book
